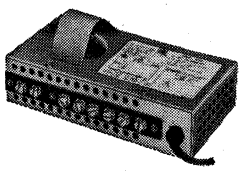
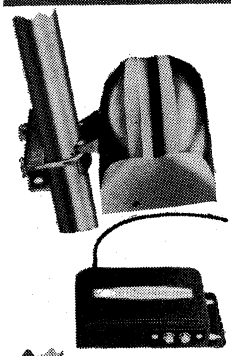
IN-THE-HOME VHF/FM SIGNAL AMPLIFIERS

TRANSISTOR 4-SET TV/FM BOOSTER, MODEL IT-4—Inexpensive to operate and requires almost no maintenance. Specially designed for weak signal areas. Provides crisp, brilliant pictures for as many as four TV or FM sets from a single antenna. Used for one set it increases signal strength 4 to 8 times. Used for two, three or four sets, it has power to spare and necessary isolation between sets. Net **$21.15**

4-SET TV/FM BOOSTER, MODEL B-24c Triples signal power to one set. Also acts as an amplified coupler to operate up to 4 TV or FM sets. Provides proper impedance match and isolation between sets and increases picture power when used with 2 or 3 sets. With 4 sets it insures that each TV or FM set receives more than 90% of the signal power picked up by the antenna. Net **$18.30**

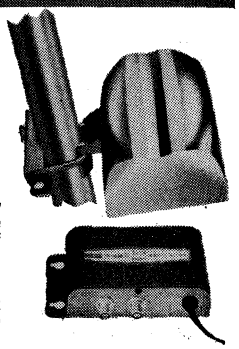


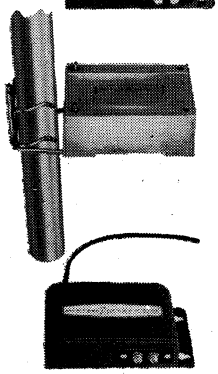
MAST MOUNTED VHF AMPLIFIERS



VAMP-2, 2-TRANSISTOR, 2-SET VHF/FM AMPLIFIER Deluxe home TV amplifier. Costs a few dollars more than most all-transistor amplifiers, but outperforms them all. Powerful 2-transistor circuit brings in weak, distant channels with sparkling clarity. All new circuit minimizes overload from strong local TV or FM stations. When used with one set—amplifier increases signals five times. Convenient splitter at the power supply, provides connections to 2 sets. Excellent for color. Easy installation on the mast in seconds. The remote power supply can be installed anywhere indoors, sends a safe 15 volts to the amplifier on the same twinlead that brings the signal down. The amplifier is housed in a rugged weather-proof aluminum cast housing. Stripless 300 ohm screws. Net **$27.40**

VAMP-2-75 75 OHM VHF/FM AMPLIFIER Powerful, low-noise 2-transistor TV amplifier is ideal as the heart of the small professional system in the home, TV showroom or service shop. Delivers all the signal power to bring in the weak signals, will not overload due to strong local TV or FM stations. Excellent for color. Most important, it is equipped for use with 75 ohm coax cable. Single 75 ohm output can be split to deliver signals to as many as 8 TV sets. Input is 300 ohm, eliminating the need for a separate balun. Rugged, weatherproof cast aluminum amplifier housing. Can be mounted on mast in seconds. Remote AC power supply, which can be installed anywhere indoors, sends a safe 15 volts to amplifier on the same coax cable that brings the signal down. Net **$31.30**





VAMP-1 TRANSISTOR VHF/FM AMPLIFIER Has a lower noise figure than any tubed booster on the market, lower than most transistor boosters. Designed for mast mounting to take advantage of best signal-to-noise ratio and provides clean snow-free reception. Especially designed transistor circuit increases antenna signals up to five times. Especially designed FM trap — reduces overload from strong local FM stations. Easy installation on any antenna mast in seconds. Separate remote power supply can be installed at set. DELUXE TV/FM AMPLIFIER (with remote power supply)—MODEL AB-3—Low-noise amplifier virtually eliminates snow. Can be used in a fringe area home installation, or as a pre-amplifier in a master TV system. The remote power supply sends AC power up to the mast-mounted amplifier on the same down-lead that carries the antenna signal down. It provides the correct power to the amplifier for any length of connecting cable up to one mile (when open twin-lead is used). Amplifier uses low noise frame-grid tubes. Provides 25 db minimum gain on all VHF-TV and FM stations. Choice of 300 ohm or 75 ohm output. Stripless terminals for 300 ohm twinlead; solderless "quick-disconnect" terminals for 75 ohm coax. No balun is needed because the input is matched to 300 ohm antennas. Net **$91.15**

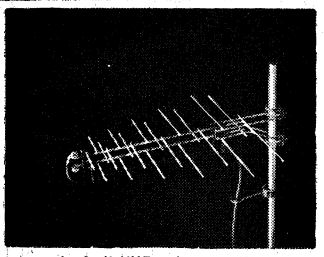
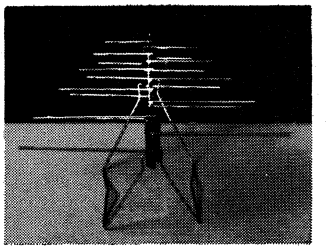
UHF ANTENNAS



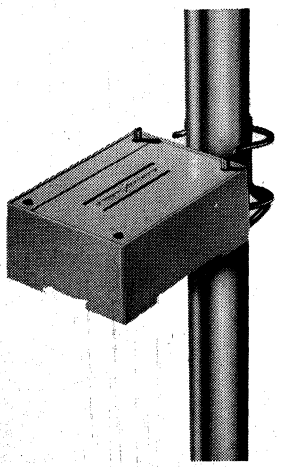
Blonder-Tongue UHF antennas are designed to match the high performance standards on all UHF channels of its famed UHF converters. They employ the well-known Periodic principle.

GOLDEN DART OUTDOOR UHF ANTENNA The unique use of the Periodic principle contributes to a uniform, high gain across the entire UHF spectrum for sharp, ghost-free pictures. Full bandwidth — makes the Golden Dart excellent for color and black & white TV. Completely pre-assembled — nothing to snap out, no screws to tighten, the Dart mounts to the mast in seconds. Smallest and most compact of all UHF antennas, it's easy to piggyback with any VHF antenna. Rugged, unitized and welded construction means no moveable joints to cause trouble. For deep fringe area reception, two Darts can be stacked with sturdy, easy-to-use stacking bars (model 3519). Dart Net **$4.15** Stacking bars Net **$1.00**



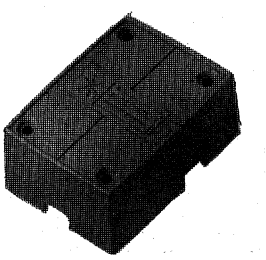
GOLDEN ARROW INDOOR UHF ANTENNA Outperforms other available indoor UHF antennas by providing peak performance on all UHF channels 14-83. The Golden Arrow employs 10 working elements to provide constant high gain and matched impedance on all channels. The excellent design minimizes ghosts and other interference. Full bandwidth, flat response means sharp black and white reception and true fidelity color picture. Sturdily built. Net **$3.95**

UHF AMPLIFIERS AND COUPLERS



CHANNEL 14 to 83 MAST-MOUNTED UHF AMPLIFIER ABLE-U2, Where black and white pictures are fuzzy, where color pictures lack brilliance, the addition of the Able-U2 will produce a dramatic improvement. The Able-U2 uses a 2 transistor circuit to proved maximum gain, excellent impedance match and assure low-noise, snow-free reception. Remote AC power supply sends a safe 15 volts to the mast mounted amplifier on the same down lead that delivers the signals to the set. 300 ohm stripless screws at terminals. Mast mounting hardware supplied. Net **$29.65**

2-WAY UHF/VHF/FM COUPLER, A-102 U/V—This COLOR APPROVED channel 2 to 83 coupler is capable of delivering full power signals to 2 all-channel sets, or 2 VHF sets or a VHF and an all-channel receiver operating on the same antenna. Can be used to couple two antennas. Couples FM sets too. Excellent interest isolation, low loss. Patented 300 ohm stainless steel stripless terminals. Net **$2.40**



4-WAY UHF/VHF/FM COUPLER, A-104 U/V—This channel 2 to 83 COLOR APPROVED coupler has flat response from 54-216 mc, 470-890 mc. Feeds 4 all-channel receivers, or any mixture of all-channel, VHF or FM sets up to 4 from a single antenna. Excellent interset isolation. Patented 300 ohm stainless steel stripless terminals. Net **$3.70**

COLOR RANGER UHF/VHF/FM LOG PERIODIC ANTENNAS

The first TRUE log periodic antenna, . . . the new Color Ranger, outperforms other antennas in any reception area. It is particularly effective for color or where ghosting is a problem because it has:

1. **Uniform gain across entire band for brilliant color reception.**
2. **Best front to back ratio in the industry for outstanding reception in weak signal areas and positive ghost-killing power.**
3. **Uniform impedance across entire band.**

It's convertible, too! The Color Ranger VHF antennas converts to UHF/VHF instantly and at any time, now or as needed for new UHF stations coming on the air, with the U-Ranger add-on. No couplers, no extra downlead required! One lead carries VHF/FM and UHF signals.

CONSTRUCTED TO MAINTAIN THEIR HIGH STANDARD OF PERFORMANCE FOR MANY YEARS

• Double boom construction. • Boom serves as transmission line — no wires to corrode or break • Elements reinforced with 6-inch tubing • Perma-Gold conductive coating • Heavy-duty 7/16 inch elements (CR-10, CR-7 and CR-5 only) • Spring-loaded knife edge contact points maintain continuity of signal • Stainless steel stripless screws for 300-ohm twin-lead connection • Snapout elements for fastest assembly • Riveted polypropelene end caps on boom maintain shape under all conditions • U-bolt mounting for easy assembly and extra ruggedness.

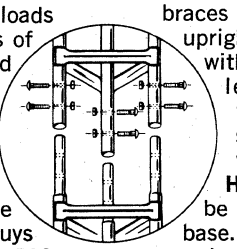
With these two Jontz Tower models you can fill any tower needs... from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Model No. 500 is self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1¼"x18 ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized.



New, extra-wide corrugated crossbraces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ⅜" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

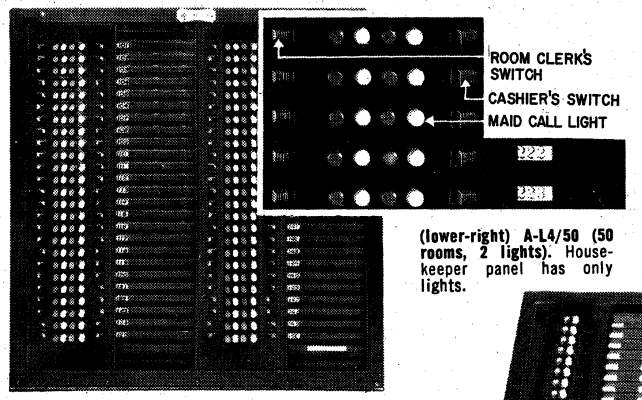
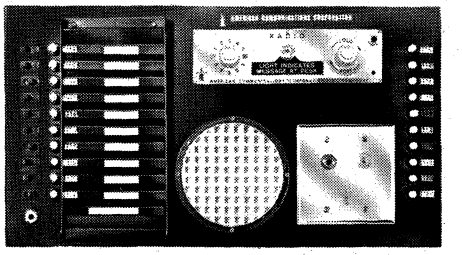
ROOM STATUS CONTROLS

ONLY ONE CONTROL WIRE REQUIRED PER ROOM!
LITERATURE AVAILABLE (SPECIFY NUMBER OF ROOMS).



(left) A-L3/50 (50 rooms, 4 lights). Switches: left row, Room Clerk; right, Cashier.
(upper-right) A-L5/10 (10 rooms, 1 light). Demonstration Panel. Shows Room Speaker, two types of Room, Units; Housekeeper lights are at right.

(lower-right) A-L4/50 (50 rooms, 2 lights). Housekeeper panel has only lights.



ROOM STATUS CONTROLS, originated by AMERICAN COMMUNICATIONS CORPORATION, are now considered an essential facility in the efficient and economical operation of hotels and motels; 4 basic designs now make this electronic aid available to occupancies of all sizes, to instantly signal to Front Office and Housekeeper the changing rental status of all guest rooms.

In addition, such instantaneous sequential control and monitoring is adaptable to 1) hospitals, for bed status ("available", "occupied", "on change") control between Admitting Office, Cashier, and Floor Supervisor, 2) restaurants, for table reservation control between Reservation Desk, Maitre d', and Waiter, and 3) Schools, Factories, Laboratories, Missile Centers, etc.

OPERATION — Operating procedures depend upon the particular model. All, however, utilize switches and lamps for maximum reliability — relays are NOT used in **AMERICAN'S** room status controls systems.

No. A-LI-2 (2 board), A-LI-3 (3 board); 3 lights. (No Maid Light, and does not connect to guest rooms.) When guest has registered, Room Clerk switches color from Green — Room Available, to Amber — Room Rented. When guest checks out, Cashier switches signal to Red — Room on Change. Housekeeper signals when room is ready for occupancy by switching from Red to Green.

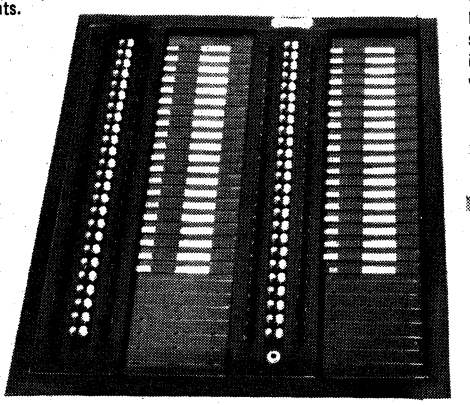
(†) Net: *A-LI-2/—, $25.00; *A-LI-3/—, $30.00.

FOLLOWING SYSTEMS CONNECT TO GUEST ROOMS
No. A-L3-2 (2 board), A-L3-3 (3 board); 4 lights. Room Unit has jack **and** light. Maid lights, the 4th row of lamps on the status board, show white, and start to pulse on and off, or "blink", when maid plugs into room jack; at the same time a maid paging circuit is connected, and a special Maid Light on guest-room Room Unit lights, and blinks in unison. When room has been serviced, maid removes plug. The Maid Lights on the control boards now change to steady white, and remain on until Housekeeper switches them off and changes the status lights on all the control boards from Red to Green — Room Available; the special Maid Light on the Room Unit goes out automatically when maid removes plug.

(†) Net: *A-L3-2/—, $40.50; *A-L3-3/—, $45.50.

No. A-L5-2 (2 board); 1 light. This Room Checkout system is the ultimate in design economy! One light on Front Office board lights to show Room Available; No Light, Rented. When guest checks out, front office clerk moves status switch so light starts to blink — room On Change. Upon instruction from Housekeeper, or upon noting blinking light on a hall signal unit, maid enters room and plugs into Room Unit. This connects Maid Call circuit (even if room is not on change). Upon completing room, maid removes plug, which **automatically** changes Front Office and Housekeeper lights to steady — Room Available.

(†) Net: *A-L5-2/—, $15.00.



No. A-L4-2 (2 board); 2 lights. For reasons of economy, this Room Checkout model, especially designed to meet the needs of the smaller occupancies, such as motels and motor inns, permits maid to **automatically** change status indication directly from guest room! Also, it has only 2 status lights (one Green, one White) on Front Office board, and 1 (White) light on Housekeeper panel. "Green", signals Room Available; No Light, Rented. Green and White, blinking, indicates Maid in Room and that Maid Call circuit is connected. White (steady) indicates room On Change.
(†) Net: *A-L4-2/—, $25.00.

(†) Priced per room, up to 100 rooms; less cable, Room Unit (where required).* All switching, signalling systems in these pages protected by Patent Nos. 3,214,747 & 3,230,520.

NEW MINIATURIZED GUEST ROOM STATUS CONTROLS, Only 25% the size of any previous designs — or of any other system made today. Solid state and plug-in module construction. Guaranteed 10 years against any defects. Costs less than other systems to install.

The Model A-L6 is a 2-light system using miniature lamps with automatic control of room status directly from room by maid. Miniaturized, and requiring only 25% of the office space of any other system, Front Office control module and housekeeper monitor position show room status as — available/ occupied/ on change/ and whether maid or other house personnel have started or completed work in room by a flashing light system. Housekeeper or Front Desk can see where maid is working and can talk directly with maid in room. (Maid Call is an optional feature).

A-L6-2 2 light, 2 boards $21.95 per room

GENERAL INFORMATION — In a 2-board system. Front Office board includes switching facilities and lights for Room Clerk, Cashier; a 3-board installation provides separate panels for these offices. All front office boards include standard guest Room Rack. Controls may be on wall panels, flush or surface mounted, or in desk consoles, depending upon size. Monitor boards (lights only) can be supplied for supervisory personnel.

(†) Priced per room, up to 100 rooms; less cable, Room Unit (where required).* Protected by Pending Patents.

MAID CALL SYSTEMS

No. A-MC-A/- is visual type. Maid plugs into room jack, which lights a lamp on a Light Panel in Housekeeper's office. Can then be paged if paging circuit is connected. Light goes out when Maid removes plug from jack. This system includes room jacks, Maid Plugs, **A-MC** Light Panel (lights only), Power Supply.

No. A-MC-B/- *Blink Light type. This newest design makes room recovery extremely rapid, through its Maid Monitor/Housekeeper "blink lights".

Soon as Maid enters guest room she plugs into Maid Jack on Room Unit. Immediately a tiny light under the jack slowly blinks on and off; at the same time, a second light blinks on Housekeeper's Light Panel, indicating "Maid in Room". Housekeeper can now page Maid if paging is provided.

When Maid has readied room, she plugs all the way into room jack, then removes plug. Maid's light now goes out but Housekeeper's light changes to steady-on —"Room Ready"; she can now switch light off at her convenience.

Installation includes Room Jacks, Maid Plugs, an **A-MC1/-** Light Panel (with lamps and switches), Power Supply, Blinker Unit.

A-P5-A Room Unit, includes jack and light for "blink light" Room Status and Maid Call. **Net $15.00.**

Room Clerk can use a **No. A-MC** Light Panel to monitor room status shown on Housekeeper panel.

SPECIFICATIONS

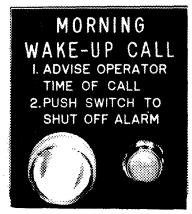
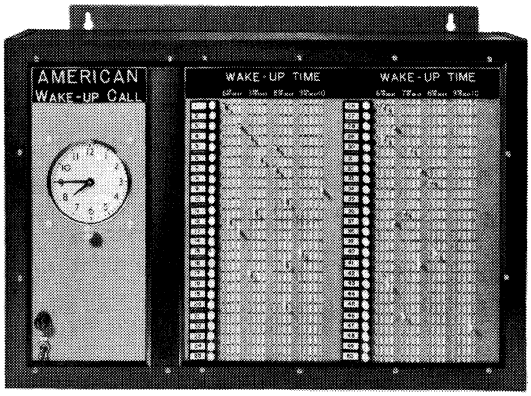
REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

AUTOMATIC WAKE-UP CALL*



No. A-P8-A Wake-up Call room unit.



No. A-WA1/50 Automatic Wake-up Call.

AMERICAN'S No. A-WA-1/- Automatic Wake-up Call is a tremendous time-saver for occupancies of any size. **Model A-WA-1/50** here illustrated is for a 50-room hotel or motel.

Master Control Panel has for each guest room a room designation strip, lamp, and 17 Time Jacks — one for each quarter-hour from 6 to 10 AM. When telephone Operator receives guest's wake-up call time, she inserts a plug into the respective Time Jack. Operation now is fully automatic: Wake-up Call "remembers" calling time and sends an insistent to the room, at the proper calling time.

This calling signal is both visible and audible: (a) at 2-second intervals a light blinks at both the office control panel, and in guest room; and, (b) in one model a recording advises guests to "shut me off" and in another a buzzer sounds loudly, when guest pushes a button (at blink light on Room Unit), signal light goes out in guest room and on office panel, and audio signal stops.

GENERAL SPECIFICATIONS

No. A-WA-1/- System includes Master Control Panel with Time Clock for 4-hour timing (up to 6 hours can be supplied); complete set of Time-set Plugs; either an **AMERICAN No. A-TD** continuous-play Tape Deck and pre-recorded Tape (not sold separately) or a Buzz Generator; 2-second Timer; and, guest-room Unit. Long-life, low-current signal lamps are used. Fuse holder, Off-On Power Switch, are front-mounted. Satin-black steel case is approx. 31 x 21 (plus 2″ mtg. skirt at top) x 4″ deep (50-room unit, illustrated); wgt. approx. 100 lbs. Operates on 115 V., 60 cy. A-C.

Net $20.00 per room, less room units; materials only. **Room Unit** (light, switch, wired and assembled on lettered metal plate, to mount on 2-gang outlet box). **Net $8.75 ea.** Cable extra.

*This system protected by pending patents.

SIGNAL MAIL RACK & MESSAGE-AT-DESK

REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The **Mail (and Message) Rack Signal System** is comprised of numbered pockets, one for each room with a push button light switch, or light and switch for each pocket. Each pocket is wired to a guest-room. When clerk files mail (or message) in pocket, he lights corresponding lamp; simultaneously, a duplicate lamp in the guest room lights, and advises guest he has a message at main desk.

A new **2-Way model, No. A-MR2,** with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

The **Message-at-Desk Signal** is identical with the Mail Rack System, except that there are no pockets — only lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described. **Model A-MD1/85** (illus.), for example, is a desk-top model for 85 guest rooms.

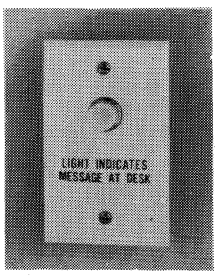
The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with shelf at top of each pocket for room key.

If guest room is not wired for radio, a separate wall plate, **A-P20-3-A,** is provided for the signal lamp; otherwise, it can be included on the radio control panel (See Room Unit on facing page).

Long-life lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front. A metal stop strip across the back of each row of pockets, in the standard or **A-MR3 Mail/Message Rack,** permits insertions only from front. **Model A-MR3/100** (illus.), is for 100 rooms, but units can be built to 1,000 or more.

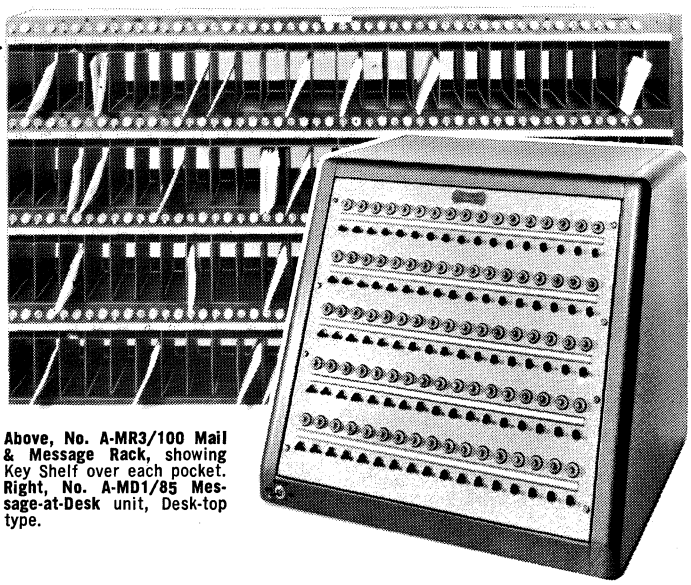
They may be made for Flush-wall recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to writing. Power Supply unit (included) is controlled by a switch. House signal wiring carries only low, safe voltage.

AMERICAN'S No. A-22X/- Multi-conductor Cable is used for connection to distribution point, and A-19/1 or A-19/2 wire for runs to Room Units.



No. A-P20-3-A Signal Plate, in guest room, mounts on standard 1-gang outlet box.

KEY SHELF →



Above, No. A-MR3/100 Mail & Message Rack, showing Key Shelf over each pocket. **Right, No. A-MD1/85 Message-at-Desk** unit, Desk-top type.

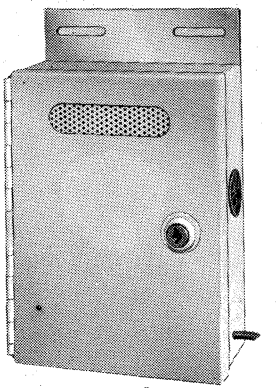
AMERICAN'S New TV-set THEFT ALARMS*

A-TA-B/50 TV-set Theft Alarm for Hotels.



TV-3, SELF-CONTAINED TV THEFT ALARM.

AMERICAN'S TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the **Model B,** for hotels of 50 rooms or more, there is the new **Model C,** for motels of under 50 room units.

Both models operate to signal any attempt to steal the television set it protects.

In addition, **AMERICAN'S** Theft Alarm has other uses:

In Apartment Houses, to signal doorman of any attempt to illegally enter an apartment.

In Apartment Houses, so tenant can alert superintendent or doorman, in an emergency, without sounding an alarm. (A "panic button" is provided in each apartment.)

In Stores, Factories, Churches, etc., to signal any attempt to steal valuable electric appliances, tools, money boxes, etc.

Installation may be made by any electrician, following detailed instructions supplied with each System (Control Panel or Console, and Room Units). **Requires only one control wire per guest room.**

Operation: Equipment under protection (TV-set, appliance, etc.) is electronically "booby trapped" during the process of being plugged into the wall outlet. Any attempt by unauthorized persons to remove connection from wall outlet, or cut power cord, starts alarm signal This signal is indicated at the Front Office as a flashing light, loud buzz or both.

Note that the flashing light can be an existing signal system, such as **AMERICAN'S** Message-at-Desk.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz and flashing light); a room indicator lamp remains lit, however, until house personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry going undetected, can signal for help in an emergency.

SPECIFICATIONS

No. A-TA-B/- TV-set Theft Alarm, including Front Office Control Console, complete w/room lights, loud-sounding buzzer, bright alarm light, flasher, alarm reset and power on-off switches and bullseye, solid state devices, and power supply; and, Room Kit (Conversion Cord, Conversion Outlet, one each per room). Control Console (A-TA-B/50) measures approx. 15″ x 7¾″ x 9″ deep; wt., approx. 30 lbs.; finish, gray crackle enameled steel. Operates on 115 V., 60 cy. A-C. **Net Price, A-TA-B/-, $12.00/room,** incl. Room Kit; minimum 50 rooms. Cable not included.

NEW SELF-CONTAINED TV THEFT ALARM. The TV-3 Theft Alarm mounts on the back of each TV set. Should anyone attempt to cut the power line, pull out the power plug or remove the Theft Alarm, an extremely shrill piercing alarm is set off. The alarm, which is audible throughout the entire building, will run for about an hour. Two options are available to the owner. Option 1 requires the management's presence to shut the alarm off. Option 2 — If the plug is re-inserted in the receptacle, the alarm will shut off by itself. This option allows for a test of the alarm.

The TV-3 is held in place by the screws that are used to hold the cover at the back of the TV set. No internal connections have to be made to the set. All that's required is to plug the TV set's power cord into the TV-3 and then plug the TV-3 into any power receptacle.

NOTE: If Power goes off, Alarm will not be set off.

Net: TV-3, from $13.50 to $10.00 depending upon quantity.

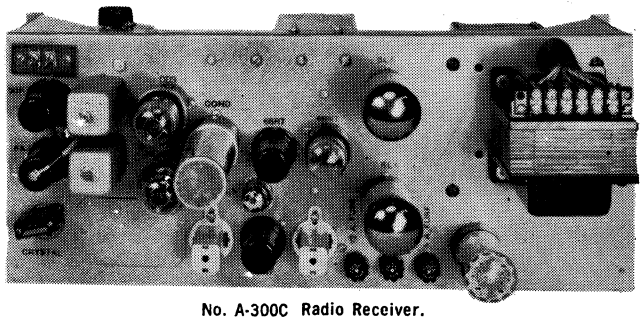
CENTRALIZED RADIO SYSTEM

No. A-CR Centralized Radio Rack, complete.



No. A-300C Radio Receiver.

The **control center** of **AMERICAN COMMUNICATIONS'** "Channelized" Radio System is the **No. A-CR Rack Unit** shown here. Signals from the Antenna System are fed to the Rack-and-Panel assembly, and then to remote speakers (guest rooms, public areas, etc.) through a system of properly selected cable and matching components as specified by the Supervising Engineer.

No. A-CR Rack can be modified to suit requirements. The standard Rack, however, is comprised of 4 **AMERICAN** No. A-300C AM Crystal-controlled Radio Receivers, 1 No. A-300T AM Tunable Radio Receiver, a panel-controlled No. A-P/M Preamplifier/Mixer (for mixing a high-impedance microphone and phonograph), Monitor Speaker, power supplies and controls, and Timer. The Radio Receivers deliver 50 watts audio power. (Additional amplification, if needed, is incorporated in a second Rack.)

If the tunable receiver is a No. A-300F (for FM reception), the house manager may tune it, like the A-300A AM Radio Receiver, to a continuous-music station for background music, available to guest when he switches to this channel — within the operating hours automatically controlled by the Timer.

The Monitor Speaker (optional), hinged to Rack, has same response as room speakers for true check of programs as received in guest rooms. Switching permits its use on background-music, P.A., etc.

If Rack is to be used with **AMERICAN'S** Patented Emergency Alert System, the standard model will include all necessary equipment and circuitry incluing a booster amplifier for the off channel. These enable remote Emergency Alert equipment to assume control and deliver to all the loudspeakers a suitably high signal whenever needed, regardless of off-on status of Rack, room speaker channel-selector switch. or P.A. system.

All 5 channel receivers are designed with a 5 position switch so that any of 5 input sources may be used. These inputs normally include a background music source, phonograph, tape deck, microphone line pick-up, short wave, etc.

Receivers are high-fidelity type, with push-pull output. The No. A-300C Radio Receiver is shown here; No. A-300T, and -F, have same physical dimensions and general appearance. Several features make these receivers exceptionally reliable and efficient: (A) the single electrolytic capacitor is plug-in type for servicing convenience; (B) circuits are triple-fused (one each for power line, filament supply, high-voltage supply); and, (C) voltage regulator tubes limit surge potentials to safe values. For trouble-free performance over long periods of continuous operation in commercial service, only close-tolerance, high-quality components are used, and operated within wide safety margins, in a ruggedized receiver design.

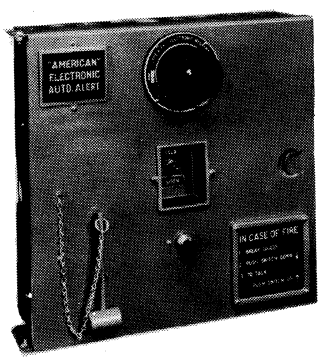
SPECIFICATIONS

Radio Receivers
Tuning range, 540-1,720 kc.; sets have 1 RF and 2 IF stages. Output transformer has taps that present balanced load impedances to the following lines: 8, 16, 32, 250 (70 V.), and 500 ohms. Rated audio output, 40 W. Each Receiver has a Selector Switch, knob-controlled from front of panel, for selection of (1) Radio; (2) Microphone; (3) Phonograph; (4) Tape Deck; and (5) Short Wave.

Rack
The **No. A-CR Centralized Radio Rack** is made of cold-rolled steel 1/16" thick; panels are aluminum, 3/32" thick. Standard finishes, Rack and Panels, slate gray or black ripple enamel. Rack amply ventilated by louvers on 3 sides. Easy-access rear door has slip-joint hinges. Rack measures approx. 68 x 22 x 18" deep. Fully fused; use on 20 A. mains service, operates from 115 V., 60 cps; 220 V., 50 cps, or as required.

Supplied completely equipped as described.
No. A-CR, complete, incl. Time Clock. **Net Price $250.00 per channel. (Monitor Speaker, extra.)**

EMERGENCY ALERT SYSTEM



No. A-EA Emergency Alert signal box has electronic siren with warble sound.

The undulating, siren-like tone of **AMERICAN'S** (patented) automatic electronic Emergency Alert System commands instant attention in an emergency.

The control center of the system is a conveniently located Emergency Alert unit resembling a Fire Box. In operation, operator breaks glass covering switch, and moves switch to SIREN or TALK. In either case, remote relays (usually about 7 in number) take over the amplifiers and loudspeakers in the related radio and P.A. systems, and the priority electronic siren or emergency instructions are heard at high level in guest rooms and public areas, regardless of the sound program previously being received, and even if set is off.

Mounted on the front of the steel Emergency Alert box are the SIREN-OFF-TALK switch in a glass-covered recess, a chained hammer, red pilot light, dynamic microphone (for issuing emergency instructions), and an instruction card. Within box are the electronic siren, audio power amplifier, spare tube, power supply, connecting strip, and a relay.

GENERAL SPECIFICATIONS

No. A-EA Emergency Alert unit. Steel signal box, enameled in Chinese Red, measures approx. 15 x 15 x 5" deep; has knockouts for conduit. Supplied equipped as described. Fully fused at 5 A. Operates on 115 V., 60 cy. A-C.

No. A-EAR Relays, for Emergency Alert installations. Multipole, to suit audio circuits into which they connect. Coils operate on 24 V. D-C. Heavy contacts. Hermetically sealed. **Prices upon request.**

APARTMENT BUILDING ALERT SYSTEM

AMERICA'S No. A-EAB automatic and electronic Apartment Building Alert System (not illustrated) is an application of the No. A-EA Emergency Alert unit, and is particularly suited to apartment building complexes.

GENERAL SPECIFICATIONS

No. A-EAB Apartment Building Alert System includes control boxes, No. A-EA Emergency Alert unit, 100 W, audio amplifier, weatherproof outdoor siren speaker(s), and wiring. Installation can include annunciator panel to show location of actuated alarm box.

System quotation and apparatus prices upon request.

No. A-A/VP-D Decoder. Has 4" numerals. Also available without speaker.

No. A-A/VP-E/3 3-bank Encoder, for Audio/Visual (silent) Paging System.

Designed for use with a Call Board, **AMERICAN'S** Audio/Visual Paging System presents an efficient means of personnel paging in hospitals, department stores, schools, hotels, factories, offices, etc.

In operation, a designated person (Telephone Operator, for instance, in a hospital) sets up on a desk-top Encoder, the call number assigned to a person (doctor or nurse) whose attention is wanted. This can be any number from 1 to 999 per bank of pushbuttons. This number then instantly appears in the window of remote readout indicators or Decoders, wherever located. The called person can acknowledge the call in a variety of ways — house phone, Intercom, etc.

Encoder No. A-A/VP-E/3 shown here has two additional banks of buttons which permit two additional calls to be set up at the same time, and by automatic switching, each will be signaled, in sequence, 20 seconds after the preceding one. Or, by operating a switch, any one of the three sets of numbers can be held in view and shown steadily until acknowledged.

A jack on the front skirt, for microphone, permits audio paging, emergency instructions, etc. A pilot light indicates the "ON" condition. Encoders may be located in several offices, and Decoders at any number of remote points.

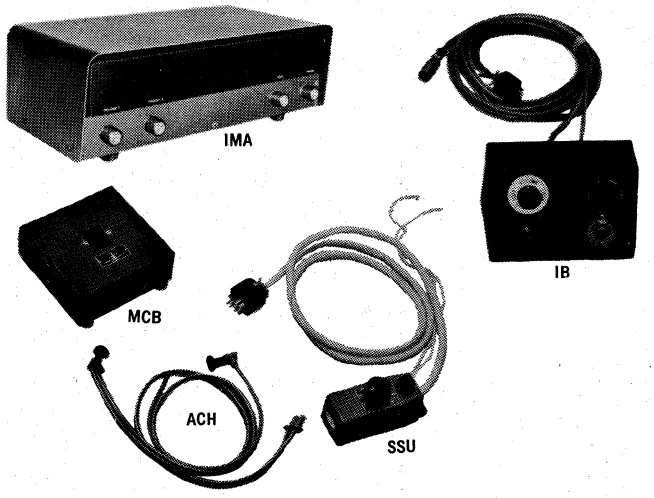
PUBLIC ADDRESS PARTS & ACCESSORIES



INSTANTANEOUS OR SIMULTANEOUS INTERPRETATION & TRANSLATION SYSTEMS

These systems are used wherever foreign groups assemble for meetings, conventions or governmental business. The system is similar to that used at the United Nations and other international conference halls.

There are usually five languages spoken for the purpose of interpretation.

The system comprises:

1. The initial pickup of the person addressing the audience.
2. Simultaneous transmission to the interpreters through headsets.
3. Each of the five interpreters, in his own language, translates what the speaker has said simultaneously to each separate seat in the auditorium.
4. At each seat there is a special switching device and air conduction head sets for the occupant, allowing him to hear either original address or any of the five interpretations.
5. The switching unit is installed in the seat arm or in the case of a temporary installation, tied to the lower arm.
6. Whenever portable equipment is used, the wires from the switching device are plugged into a specially designed floor molding, that is placed directly under and through the seats.

The system consists of the following equipment:

The Interpreter's Box, Model IB	$ 35.00
Interpreter's Mixer-Amplifier, 25 W. solid state, Model IMA	160.00
Interpreter's Microphone, lavalier type, Model IM (not shown)	55.00
Seat Switching Unit, Model SSU	18.55

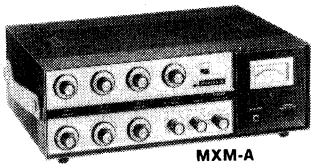
MIXER-PREAMPLIFIERS



MXM-A

MXM-A MIXER-PREAMPLIFIER

Professional, broadcast quality, self-powered unit which accommodates 7 mixed input signals simultaneously (5 may be from high or low impedance mics). One mic. input converts to an equalized mag. phono cartridge or tape playback head. Two aux. (high imped., high level) are connected to a fader control. Bridging input accepts signals from a remote preamplifier or a zero level line. Up to 3 MXM-A's may be paralleled to provide 21 inputs (up to 15 mics.). Output level may be monitored aurally and visually by headset and built-in VU meter. Panel-controlled speech filters for all mic. inputs; separate bass and treble tone controls. Provision for converting high imped. to balanced low imped. microphone inputs by using plug-in transformers. Sockets accept remote control and precedence plug-in units. Panel-controlled calibrated low frequency (notch) filter effectively "tunes out" hum, turntable rumble, etc. **Output:** 20 V. into high imped. load at 1%; 4 V. into 600 ohms at 1%; (from bridging output) 0.1 V. into 1 Meg. **Freq. Response:** 18-38,000 cps ±1 db. **Output Imped.:** high imped. (less than 3,000 ohms); 500/600 ohms with TL 600 (broadcast quality) plug-in transformer. **Sensitivity:** high imped. 2 MV.; low imped. 0.1 V.; Mag., 1 MV.; bridging 0.5 V.; Aux., 0.1 V. **Hum: (below rated output)** Mic. 60 db. **Tone Controls:** treble: (10 KC) + 12 db to − 12 db; bass: (50 cps) + 14 db to − 8 db. **Tubes:** 4-12AX7A, 1-7247, 1-12AU7A plus 3 silicon rectifiers. **Power Consumption:** 47 watts, 117 VAC; 50/60 cps. **Dimen.:** 16½" W, 12" D, 4¾" H. **Ship. MTM

MTM ALL-SILICON TRANSISTOR MIXER-PREAMPLIFIER ▩

Professional, all-silicon transistor, self-powered unit (operates from 120 VAC or 12-15 VDC). Mixes 6 input signals (4 may be low impedance microphones). Unbalanced low impedance microphone inputs convert to balanced (50-600 ohms) with T525U plug-in transformer – or convert to mag. phono/tape input with PMC-1 plug-in module. 2 aux. (high impedance, high level) are connected to a fader control. Up to 3 MTM's may be paralleled to provide 18 inputs. Output level may be monitored aurally (head set) and visually (built-in meter). Sockets accept individual remote control, precedence and compressor plug-in units. Speech filters in mic. channels 1 and 2. R.F. filters in all mic. channels. **Output:** at 0 db: 1.8 V. into 500 ohms (0.5%); at +12 db: 7 V. into 500 ohms (2.5%); output transformer is built-in; no high impedance output. **Freq. BOOSTER AMPLIERS

BOGEN SOUND SYSTEMS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools . . . wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The models described on the preceding page are ideal preamplifiers for these boosters. The MO200A, MO100A, and MT100 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources – any frequency or voltage – capable of driving servos, motors, vibration (shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs).

No cage is furnished with MO200A.

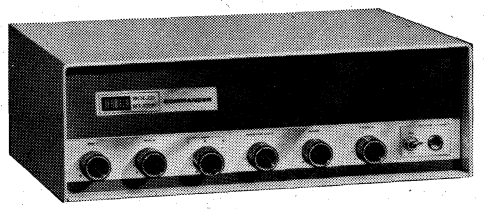
JERROLD

ULTRA-RELIABLE SOLID STATE PA SYSTEMS



CA-50T 50 watts RMS • 2 microphone inputs, expandable to 4 • "Heat Guard"

MAXIMUM RELIABILITY FROM TRANSISTORS AND 12-VOLT OPERATION!

Jerrold solid state amplifiers eliminate **both** excessive heat and component strain — the major causes of costly service calls. These unique amplifiers convert the usual 117 volt AC supply down to 12 volts DC so all circuits operate on very low voltages. All circuit components last longer because they are **never** subjected to the strain of high voltages. And output transistors are protected against damage from shorted or open speaker lines. High-power models have a "Heat Guard" that automatically shuts off the amplifier to avoid damage from excessively high ambient temperatures.

JERROLD QUALITY AND VERSATILITY

• 12-volt circuitry simplifies conversion to battery operation for mobile, outdoor or emergency applications • full-rated output with 117 V/ac or 12 V/dc • provision for additional microphone inputs • 2 auxiliary inputs with fader control • 4, 8, and 16 ohm outputs, plus 25V and 70.7V balanced lines • heavy duty toggle switch • power "on" light • complete with protective metal cover.

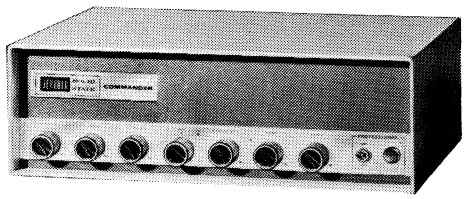
PROFESSIONAL SOLID STATE AMPLIFIERS

JERROLD

EXTRA RELIABILITY, VERSATILITY AND CONVENIENCE!

Like all Jerrold amplifiers, Professional models feature all-transistor 12-volt operation which eliminates the two major causes of service calls — excessive heat and high voltage component strain. In addition, they perform superbly and are especially convenient to install, operate and to expand in the future. The number of high impedance microphone inputs can be increased with a pre-amplifier that mounts inside the cabinet. All microphone inputs have snap-on Cannon connectors and individual front panel level controls. All may be individually matched to low impedance microphones with on-chassis, plug-in transformers. A precedence relay socket makes addition of paging fast and easy. Two auxiliary inputs have a fader control for radio, phono or FM tuner. There is also provision for magnetic phono input.



CAP-40T 40 watts RMS • 3 mic inputs, expandable to 5 • "Heat Guard" • provisions for precedence and mag. phono.

BUILT-IN QUALITY

• Easy conversion to battery operation for mobile, outdoor or emergency use • Crisp, clean sound • 4, 8 and 16 ohm outputs • 25V and 70.7V balanced lines for installing more speakers over longer distances with greater ease • Accessory provides balanced 600 ohm input for telephone or wired music • Conservatively rated components • Complete with metal cover.

R&RT SERIES

R SERIES ARE VACUUM TUBE MODELS, teaching tools of moderate cost and proven reliability. They are built for intensive usage with maximum reliability, optimum performance, and minimum maintenance; they include many convenience, performance, and safety features.

RUGGEDLY BUILT, both R and RT Series models have cases made of crack-proof, warp-proof, glue-blocked plywood covered with warm gray, washable, scratch-resistant vinyl. They are further protected with metal corners and kickproof, die-formed, perforated metal grilles and vent plates. Come-apart hinges obviate the most vulnerable part of case construction. Ready access for servicing is provided. Cases rest on spring-floated feet. All are transformer powered for maximum safety and best performance. All are UL approved. Made in the U.S.A. Handy bid specifications are available from the factory to authorized personnel. Condensed operating instructions in large type and clearly illustrated are plastic-coated and permanently mounted in lids. SPECIFICATIONS AND PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

RT SERIES MODELS WITH TRANSPECTRUM SOUND ARE FULLY TRANSISTORIZED. The purity and range of Transpectrum Sound is not only the result of using transistors properly in completely new and original circuitry, but more importantly it is the result of Newcomb interrelationship engineering — the precise matching and balancing of all parts of the system so that the performance of the whole machine exceeds what might be expected from summing up the contributions made by the various components. All RT phonographs are equipped with Newcomb's lighted Instant Stop-Pause-Go control, the finest instructional pause device on the market.

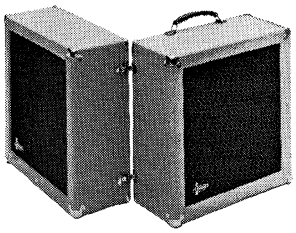
PORTABLE LOUDSPEAKERS

TR SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

ON THIS PAGE ARE SHOWN THE VARIOUS LOUDSPEAKER MODELS USED WITH NEWCOMB TR SERIES SYSTEMS



NEWCOMB S-212 SERIES

These open-back designs are the most popular of all square dance system reproducers because they provide a unique combination of light weight, high output per watt input, and low cost. Their wide-range response makes them ideal for general use. Each model includes two independent reproducers in a split case. Speakers snap together back-to-back for carrying. Case size: 16¾″ x 16¼″ x 13⅛″. 25′ cords stow on hooks inside case.

Weight: 22 lbs. **PROFESSIONAL NET: $69.50**

NEWCOMB SUPER COLUMN, MODEL SCS-412

Here's the best column speaker you've ever heard. The Newcomb SCS-412 gives you super intelligibility, super efficiency, super power handling capacity. It contains four *twelve-inch* speakers specially developed for column use. Its peak power handling capacity of 120 watts makes for dependability and unusually low distortion when used with conventionally-powered systems. Each amplifier watt is converted into more sound than is available from any other column. The SCS-412 makes small amplifiers sound like big ones. It will project your voice clear as crystal, syllable-perfect over the noisiest big crowd. It takes a man-size system to produce these results. The SCS-412 stands 56″ high, is 15″ wide, 7½″ deep, weighs 42½ pounds. Impedance is 8 ohms. STEREOPHONIC SYSTEMS
MICROPHONES, ACCESSORIES

TR SERIES

Built with a great reserve of power for most uses – 40 watts peak per channel – the Newcomb TRS-1680 is perhaps the most complete and flexible portable sound system ever built. It reproduces stereo or mono with the turn of a knob. Stereo or mono tape or radio can be fed to the system. Live music and speech are reproduced either stereo- or monophonically.

TRS-1680 SERIES 80 WATT

It has three mike channels. The central mike puts the speaker or square dance caller in the middle, midway between the reproducers. There are separate treble, bass, and volume controls for phono or other reproduced sound. Each mike channel has its own, individual tone and volume controls. Mike tone controls are rotated for treble adjustment, pushed or pulled for bass. There is a blend control to provide any degree of stereo you wish. There are "Left" and "Right" inputs for radio, tape, or auxiliary; a scratch filter; "All" or "Phono" monitor jacks; jacks for two or four speakers with an impedance-matching switch. Turntable-amplifier unit DIMENSIONS: 9¼" x 17⅞" x 18⅝"; 43 lbs. POWER CONSUMPTION: 180 watts, 117 volts, 60 cycles a.c. A wide choice of reproducers to meet specific assignments is offered...

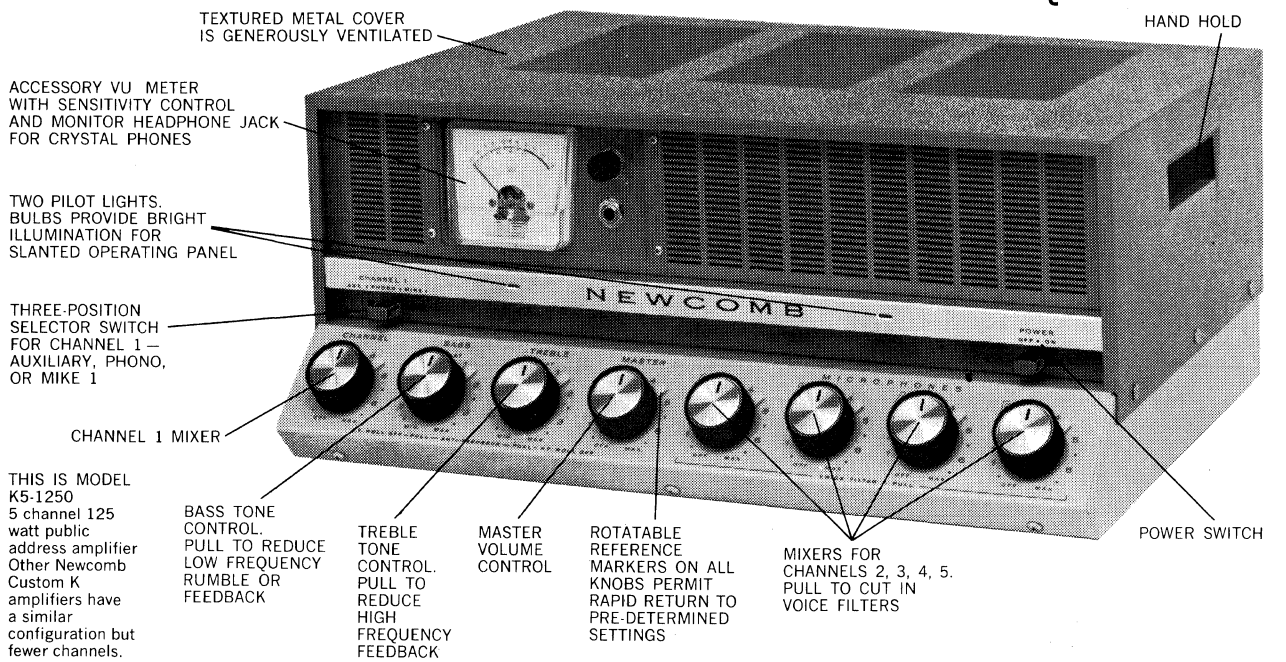
MODULAR PUBLIC ADDRESS AMPLIFIERS

CUSTOM SERIES K

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY



Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address amplifiers weren't made this way to begin with.

All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than ½%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** −18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, −12 db at 20 cycles. **Treble tone control range:** −18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, −12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required** for 1 volt output from cathode followers: **Mikes,** .0028 volts, gain 54* db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. Equalized to full RIAA curve. **Ceramic pickup,** .086 volts. Equalized to RIAA curve. **Tuner or Tape input** (Aux.), .34 volts, ½ meg., gain 6.4* db. *Gain stated is with 1 meg. output load. MODEL P POWER SUPPLY takes the place of the power amplifier in the space provided in the K3, K4R, and K5 preamp modules, and supplies power to them through an octal socket. (It is never needed when a Model 400, 600, or 1250 power amplifier is used.) Model P includes a socket for a plug-in output transformer and output terminals for a balanced or unbalanced 600 ohm line. **Maximum 600 ohm output** = 0 VU. **Input** power: 117 volts, 60 cycles, 22 watts. **Wt.** 4½ lbs. **List:** (with tubes) $37.50.

SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

NEWCOMB

STEREO TAPE RECORDERS, TWO-CHANNEL AMPLIFER, SYSTEMS

TAPE RECORDERS

NEW TX-10 SERIES

CYBERNETICALLY ENGINEERED FOR INTUITIVE OPERATION ▪ SOUND ON SOUND RECORDING ▪ THREE HEADS ▪ HYSTERESIS MOTOR ▪ MONITOR BEFORE OR AFTER RECORDING ▪ ANY SIZE REELS—3″ TO 10½″ ▪ MIXING CONTROLS ▪ POINTER-TO-POINTER METERS ▪ DIFFERENTIAL BRAKING

Essentially a machine for the perfectionist, the Newcomb TX-10 incorporates virtually all of the features professional users have said they would like to see in a portable recorder. The TX-10 is thoroughly dependable, a high precision instrument, with a transport mechanism that is probably the most foolproof, the gentlest on tape of any machine in the world. Tape movement is controlled with a telescoping joy stick. Operation is intuitive. The natural thing to do is the right thing to do. You can record sound on sound ad infinitum. For example, you first record on track one. Twist the selector and you record on track two while the signal from track one is being transferred to track two. Twist the switch again and you are adding new material to track one while the previously combined signal from track two is being re-recorded on track one. There is no limit to the number of times this can be done. Tape loads in a straight line. No pressure pads on heads. All tape guides are stainless steel. Shuts off automatically at reel's end. Head covers remove for easy cleaning and editing. A pause-edit position of the joystick permits inching tape to exact location desired. The TX-10 is a two-speed machine—7½ ips and 3¾ ips—selected by push button with automatic speed-frequency correction. (15/7½ ips machines available on special order.) A relatively powerful, cool-running hysteresis synchronous motor and dynamically-balanced flywheel drive keep flutter and wow below .2% at 7½, .25% at 3¾, or .1% at 15 ips. The TX-10 has three heads—record, playback, and erase. 100KC bias and erase oscillators with indicators. Response is ±2 db 30-18,000 cps at 7½ ips, or ±3 db 30-13,000 cps at 3¾ ips. The TX-10 may be operated either vertically or horizontally. The dual volume indicating meters are illuminated, arranged pointer-to-pointer, show playback as well as recording levels. Too prevent accidental erasure, you must push a separate interlock button to record. The four-digit counter permits close measurements even with a 10½″ reel fully loaded with thin-base tape. There are separate "mike" and "line" input mixing controls for each channel, a balance control, a ganged volume control, a pilot light. A roomy opening on the left-hand side of the case provides for all inputs and power cord stowage. There are sockets for Cannon XLR-3-12C male connectors, easily accessible sockets for Newcomb plug-in input transformers to permit use of low impedance microphones. Outputs are on the right side of the case.
Dimensions: 12⅞″ x 16¾″ x 9½″. Weight: 36½ lbs. Power requirements: 95 watts, 117 volts, 60 cycles a.c.

PROFESSIONAL USERS NET: $750.00. Unmounted CA-133 carrying case $25.00

• 6 Separate 2-Way Conversations Simultaneously
• Selective Paging with Reply • Push-Button Channel Selector
• Start a System with any number of Masters and Staffs

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 12 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 12 stations are used, channels must be *shared*; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

• **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). The same station can be "private" to one or more Masters and "non-private" to others, and retain full communication facilities.
• **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, you reply.
• **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.
• **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.
• **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.
• **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.
• **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.
• **EXTERNAL RELAY CONTROL**—A standard built-in feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. For use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth.
• **RECIPROCAL POWER SUPPLY**—Each Master operates on 110-120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the Masters in the system can operate without being plugged-in.
• **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.
• **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where exceptionally high volume at Staff locations is needed. Ideal for paging speakers. T-HP-3 provides more than twice the volume of universal Staff; T-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.

• **CRADLE PHONE**—(optional accessory on Masters or Staffs). Has live microphone. Provides listening privacy and greater speaking convenience. Diminishes background noises in noisy areas. • **POWER PAGING BOOSTER**—(Optional accessory). Use with "CHIEF" Masters to page a group of speakers with a single button. 30 watts output. Requires its own paging speakers (as T-C-20, T-HP-3). Provides paging facility only . . . paged stations cannot reply or originate calls through paging speakers. Connects to one Master, other Masters can also utilize facilities.

How to Determine Cable Requirements. To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For T-C-4920 and T-C-RP-5920, use two lengths of 6226 Cable; and for T-C-4930 use three lengths of 6226 Cable, etc. To connect T-C-41, T-C-20, T-C-42 or T-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the T-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each T-C-41 or T-C-42, follow same procedure). Connect T-S-111 at any convenient point between remote speaker and Master Station.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 20 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add RW-10 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 110-120 volts, AC only. U.L. Approved.

ATLAS SOUND

ATLAS PAGING AND TALK BACK SPEAKERS

The HU and CJ models listed below are all equipped with the well-known "Versalock" mounting bracket. This rigid, rugged and dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. The HU and TP horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglas. Rugged diecastings and tough steel parts add strength wherever necessary. All models are 100% weatherproof under all climatic conditions.

HU-12N Small in size and low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

HU-15N The famous ATLAS SOUND "work horse," HU-15N is the most popular all-purpose, trouble-free speaker of its type and size.

HU-24N Similar to HU-15N. The larger horn improves low frequency response and increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

CJ-14N A wide angle speaker with a rectangular horn opening which gives broad sound dispersion in the horizontal plane while maintaining good vertical coverage.

EC-10 The lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Made possible by a breakthrough in design, materials and performance, EC-10 gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

Horn sections are molded of a new, tough, all-weather, acrylic plastic and the handsome beige-brown color combination blends with any decor. The tough steel bracket is adjustable and makes mounting simple and secure. Model EC-10 is unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

CJ-30N Similar to CJ-14N, except the power handling capacity is increased and the larger, wide angle horn improves low frequency response.

TP-15N One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. The universal bracket mounts the dual horns at a 10° angle down or out from wall surface or pole.

TP-24N Same as TP-15N but equipped with oversized horns for improved low frequency response. Excellent for bi-directional paging locations required to reproduce music.

The DéCor speakers described below are designed to simulate a lamp, handsomely styled for contemporary interiors. All horn parts, fully adjustable bracket and base-canopy, are finished in brushed satin aluminum. Base-canopy conceals wiring and matching transformer, if required. All mounting hardware included. May be used outdoors in sheltered locations.

DU-12N Equipped with a driver type reproducer unit for high efficiency, directivity and intelligibility.

DC-5 Equipped with a high efficiency weather-resistant 5" diameter cone speaker for pleasing reproduction of low level voice and music. Ideal for locations where appearance is a critical factor, such as churches, conference halls, restaurants and similar quiet surroundings.

ATLAS MICROPHONE STANDS AND ACCESSORIES

ATLAS SOUND microphone stands and accessories are noted for variety, quality and reliable performance. The famous, extra-long clutch for secure, full hand grip is standard on all manual models. Clutch operation is velvet-smooth, wear proof parts are jam free and positive locking; the adjustable tube cannot slip and drop unexpectedly.

New, low profile bases with modern, slim silhouettes are less conspicuous and more functional. Improved designs concentrate base weight at the outer edge for maximum stability. Additional anti-tip bumpers are located between self-leveling, shock-absorbing pads which protect desk, table and floor.

Superchrome plated finishes are lifetime wear and rust resistant. Stand parts and accessories are precision threaded for easy assembly and versatile interchangeability. All models have standard 5/8"-27 threads for microphone attachment.

MS-10C Popular, budget-priced floor stand for low cost applications. Sturdy, wrinkle gray base with stability for average weight microphones.

New Low Profile Bases

MS-4 Three tubes with two clutches adjust from standard height for adults to special low of 25" for children and seated performers. Ideal for instrumentalists requiring low microphone placement. New, low silhouette base with dark gray wrinkle finish.

MS-11C General purpose, all chrome design with new, low profile base contour and more weight for greater stability. Slim, inconspicuous silhouette is both elegant and modern, suits any decor where styling and appearance are important.

MS-14G Identical to MS-11C, but all gold finished for special decor requirements. Complements both black and gold model microphones.

MS-11S Self-locking version of MS-11C with unique, automatic clutch for effortless, instantaneous changes in height. The stand is adjusted by simply grasping the decorative black control sleeve and raising or lowering the microphone. Removing the hand automatically locks the position. All chrome with new, low profile base.

MS-12C Same general purpose, stable design as new MS-11C, with base finished in dark gray wrinkle.

MS-12S Special, automatic clutch action for easy, quick height adjustments. Identical in size, unique operation and applications to MS-11S, except with wrinkle gray base.

MS-20 Rugged, heavy duty combination for safer support of any microphone. Larger 12", low contour base has more anti-tip weight at the outer edge for maximum stability. Oversize 1 1/8"-7/8" tube assembly includes adaptor for 5/8"-27 threads.

MS-25 Professional floor stand. Integral air suspension system counterbalances microphone weight to prevent out of control crashdown, take effort out of height changes. Air cushioning action is adjustable, floats microphone tube gently down without severe mechanical shock if clutch is accidently not tightened or released. Heavy duty, gray and chrome base contacts floor on large, 17" circle. Triangular shape and concave sides permit standing close for easy handling without stepping on base. Oversize 1 1/8"-7/8" tube combination includes 5/8"-27 thread adaptor. MS-25 gives maximum stability and safety for all microphones, including the finest and most expensive — at home, on stage and in the studio.

CS-1 Tripod base infinitely adjustable from 10" diameter standing, to 42" circle flat on floor. Reverse-collapses to compact 23" for storage. Useful in restricted space, on uneven surfaces, for clustering microphones and indoor/outdoor portability.

CS-52 Handsome, three-legged floor stand. Combines the slim, less conspicuous appearance of modern, low profile design with large, 15" base stability. Packaged in one, reshippable carton.

GENERAL PURPOSE MICROPHONES

Unidirectional Line Microphone

MODEL 644 SOUND SPOT® — Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening* instrument, making it the most directional P.A. microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db above 700 Hz giving practically complete rejection of unwanted sound. Cardioid below 700 Hz. This feature gives extremely high rejection of random noise. Reverberation and feedback are vastly lower than with any other P.A. microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center, providing best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than most other microphones.

Frequency response is smooth from 40 to 10,000 Hz. Acoustalloy® diaphragm. High output: —53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure die-cast zinc with ¾" aluminum tube; satin chrome finish. Rear diameter 2 5/16", length 16". Cable is 15'. Net weight, 2 lbs. 9 oz. **Net price** **$66.00**

Projector Horns

Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

EXCLUSIVE COMPOUND HORNS permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.

MODEL FC100—Similar to the famous CDP®, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn. Large horn is fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn — cut-off, 100 Hz; taper, 100 Hz; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 Hz. Mouth size 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. **Net price** **$30.00**

MODEL AC100—Concentrating version of CDP®. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 Hz; taper, 100 Hz; air column length, 56"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 Hz. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11½ lbs. **Net price** **$51.00**

REENTRANT HORNS provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high-frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die-cast mounting plate plus precision die-cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1⅜"-18 threads.

MODEL FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency cut-off, 150 Hz; taper, 150 Hz; air column length, 45"; sound distribution, 70° x 100°; mouth size, 10½" x 20½"; depth (less driver), 21"; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. **Net price** **$26.70**

MODEL AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber edge-damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1⅜"-18 thread. Specifications: Low-frequency horn—cut-off, 150 Hz; taper, 150 Hz; air column length, 41"; sound distribution, 85°; diameter, 21"; depth (less driver), 17". Net Weight (less driver), 6½ lbs. **Net price** **$29.40**

MODEL HC400 — Features wide-angle dispersion in a round reentrant horn. Same horn, less driver, as used in 844A. May be combined with any E-V driver listed on next page. High articulation for difficult paging jobs. Ruggedly constructed die-cast body. Completely weatherproofed and tropicalized. Nom. dispersion: 90°. Low frequency cutoff: 250 Hz. Taper: 250 Hz. Air column length: 16". Finished in Mesa Tan baked enamel. 10" dia., 5¼" deep. Net weight: 4½ lbs. **Net price** **$9.00**

Versatile Convertible Drivers

Designed for smooth peak-free response with maximum efficiency, Electro-Voice public address drivers offer the greatest possible long term economy with a consistently high level of performance.
The Reentrant Driver Model 1828R (30 watts) will produce maximum intelligibility when used with such Electro-Voice horns as the AR150 & FR150, and HC400, yet its freedom from severe response peaks assures improved results even when installed on other Reentrant Horns.
The versatile Convertible Drivers listed below are easily adapted for use with all Reentrant-type Horns (E-V and others), but are especially effective when used with the exclusive Electro-Voice Compound Diffraction Projectors (CDP®), FC100, and AC100.
For use in constant voltage systems, order 1828T, DC40T, DC50T, or 1829T.
All drivers have 1⅜" - 18 threads for attaching horn.
E-V Diaphragm replacement kits (easily field replaceable) are available for all Electro-Voice public address drivers.

MICROPHONES

POLYDIRECTIONAL RIBBON MICROPHONE—77DX

The standard quality microphone of the broadcast industry, the RCA 77-DX, is available in two models; one with a low gloss finish for TV, the other a satin chrome finish for AM and FM. The 77-DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 30-20,000 cycle frequency response of the 77-DX makes it suitable for every high fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30 to 150 ohm output impedance.

This 77-DX mounts on a standard ½-inch pipe thread, and comes with 30 feet of three conductor shielded cable, less plug.

77-DX Satin Chrome Finish **$206.00***
77-DX-G Low Luster Gray Finish **$197.00***

BI-DIRECTIONAL RIBBON MICROPHONE—BK-11A

In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bidirectional characteristics and excellent frequency response (20 to 20,000 cps) make the BK-11A an extremely useful production tool. The output can be connected for 30, 150, and 250 ohm operation. A three position switch permits selection of desired frequency ranges for voice and music.

The BK-11A has been designed for use with the inexpensive MA-06 desk stand, and it can also be used with any standard ½-inch pipe thread desk or floor stand. Thirty feet of three conductor cable is supplied without a connector.

BK-11A **$131.25***

UNIAXIAL RIBBON MICROPHONE—BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 cps permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. The low-luster umber gray finish makes it ideal for TV.

It is supplied with thirty feet of three conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has ⅛-inch pipe thread.

BK-5B **$146.50***

LAVALIER MICROPHONE—BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3 ounce unit is only 2 9/16 by 15/16 inches. Wide range frequency response (60-15,000 cps) permits using the microphone for all speech applications. The 250 ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections.

The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three conductor cable is supplied, less connector.

BK-6B with lanyard and fastener **$86.00***

SUBMINIATURE LAVALIER MICROPHONE—BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only ¾" x 1½". It has a wide-frequency response of 60 to 18,000 cps, which has been tailored for proper speech balance. The BK-12A is essentially non-directional to 6,000 cycles, and as a result, ordinary errors in orientation have negligible effect upon response. The microphone comes complete with lanyard, tie clip holder, cable clip and 30-feet of 2-conductor cable (less connector).

BK-12A **$95.00***

BI-DIRECTIONAL RIBBON MICROPHONE—SK-46

The SK-46 is designed for high quality indoor use. It has excellent frequency response 40-15,000 cps and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000 ohm output. Dependable performance as well as attractive styling make the SK-46 an ideal choice for high fidelity applications. The SK-46 has a ⅝-inch-27 mounting thread and is supplied with 25 feet of two conductor cable (less connector).

SK-46 ..... **$54.95***

NON-DIRECTIONAL DYNAMIC MICROPHONE—BK-1A

Ideal for outdoor use or wherever constant handling is required the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 cps. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30 and 150 ohm connections are included.

The BK-1A may be mounted on any type stand having ½-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three conductor cable is supplied, less conductor.

BK-1A **$73.50***

GENERAL PURPOSE DYNAMIC MICROPHONE—SK-30/SK-31

Here is an excellent non-directional general purpose microphone available as a low-impedance (SK-30) or high-impedance (SK-31) unit. It is rugged and lightweight with good response to voice and music (60-12,000 cps). In addition to being hand held, it may be swivel mounted on a desk or floor stand or it may be mounted on a goose-neck stand. A ⅝-inch-27 thread swivel adaptor is available for floor or desk stand mounting. The microphone comes complete with 20-feet of shielded cable (less connector).

SK-30 ..... **$30.00***
SK-31 ..... **$31.00***

NON-DIRECTIONAL DYNAMIC MICROPHONE—SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. It may be connected for a 150 to 200 ohm balanced output, for a 15,000 ohm output. Response is from 70 to 12,000 cps. Mounting with any ⅝-inch-27 fixture thread permits the use of low cost stands. Finish is low gloss gray, and the SK-45B is supplied with 25 feet of cable less connector.

SK-45B **$45.00***

NON-DIRECTIONAL DYNAMIC MICROPHONE—SK-39A

Cue and talk-back applications are perfect for this inexpensive dynamic microphone. The SK-39A is rugged and relatively insensitive to mechanical shock and wind. Frequency response is 60 to 10,000 cps. It may be mounted on any ⅝-inch-27 fixture thread, and is supplied with 25 feet of two conductor cable (less connector).

SK-39A **$23.40***

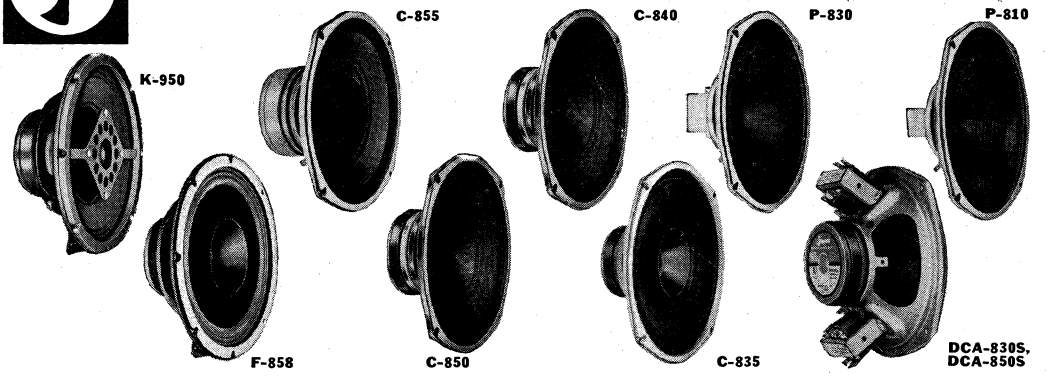
Jensen Professional Series Speakers

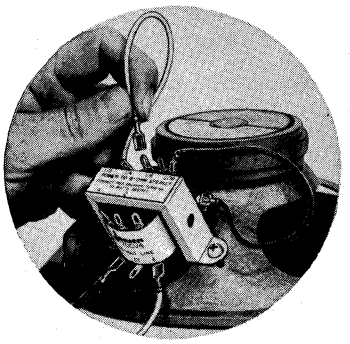
8" SPEAKERS FOR DISTRIBUTED SOUND

VALUE ENGINEERED FOR LOWEST INSTALLED COST



This new line of Jensen 8-inch Professional Series loudspeakers is specially designed to meet the exacting rigorous demands of commercial sound service. The 8-inch size is ideal for the majority of all distributed sound systems giving more than adequate low frequency range with a minimum of enclosure and mounting complications.

A **complete line** of speakers **value engineered** for lowest **installed cost** with such features as the handy 10-pack, preattached transformers, exclusive solderless connectors, weather and corrosion resistant designs . . . and many more. A wide selection of models to meet every need—from the lowest cost highly competitive application to the most sophisticated, highest quality system. Four conventional type speakers with varying sensitivity and power rating (magnetic energy) with the typical 90° coverage angle. Two models have dual cone radiating system with 95° coverage angle and unusually high frequency range. Another basic model is an 8" coaxial with 110° coverage angle and unusual frequency range and smoothness for the finest quality and intelligibility. This 110° coverage angle provides approximately **twice** the coverage area, so **fewer** are required for a given installation. Still another model is the unique Jensen FLEXAIR® with dual-cone radiator; super-low resonance for those small acoustic enclosures and back boxes; big-speaker lows with the remarkable H-F range to match. Two models have dual voice coil for emergency channel access and similar applications.



PREATTACHED TRANSFORMERS

The nine basic models mentioned above are all available with preattached 25-volt or 70.7-volt "constant voltage" transformers, Models 25CV4 or 70CV4. Factory attachment insures lower cost to the end user.

AVAILABLE IN HANDY 10-PACK

All of these speakers are available at added savings and convenience bulk-packed ten per carton (with or without transformers). These handy 10-pack cartons have individual sleeves for each speaker thus giving speaker protection of odd lots until actual installation.

KWIKON* INSTANT CONNECTORS

Simply twist bare ends of two 12" input leads supplied for each speaker to incoming signal cable leads, insulate with wire-nut or tape. Slide sleeve clips onto input terminal lugs of speaker or preattached transformer as speaker assembly is raised into place. KWIKON* instant connectors also provide simple fast power tap readjustment on transformer. *T.M.

"CONSTANT VOLTAGE" TRANSFORMERS

Specially designed for use with the popular "constant voltage" distribution systems. Primary (input) windings are center-tapped for balanced-to-ground input circuits or for special circuit needs. Tapped secondary windings provide adjustment of power to the 8-ohm speaker in 3 db steps from ½ watt to 4 watts. Nominal core size 5/8" x 3/8". Two 1/16" dia. mounting holes on 2 3/8" centers. Available separately or preattached to these special 8-inch speakers.

JENSEN CALSTAR* COLUMN SPEAKERS

CALSTAR Controlled-Angle Lobe-Suppressed Twin-Array Reproducers are the result of an exhaustive study of directional sound radiation by Jensen engineers. In a CALSTAR column, an array of small woofers, covering the lower frequency range, is combined with a shorter array of tweeters covering the high frequency range (where the polar sharpening would otherwise become severe). Next, the signal distribution to each element is "tailored" so that the effective array length decreases as the frequency increases. The final result is a column design in which the vertical coverage angle is unusually constant for all frequencies and therefore exceptionally uniform sound quality and high speech intelligibility are achieved throughout the audience area. The exact signal distribution at each frequency provided by the pattern shaping networks has also been chosen to suppress unwanted side lobes.

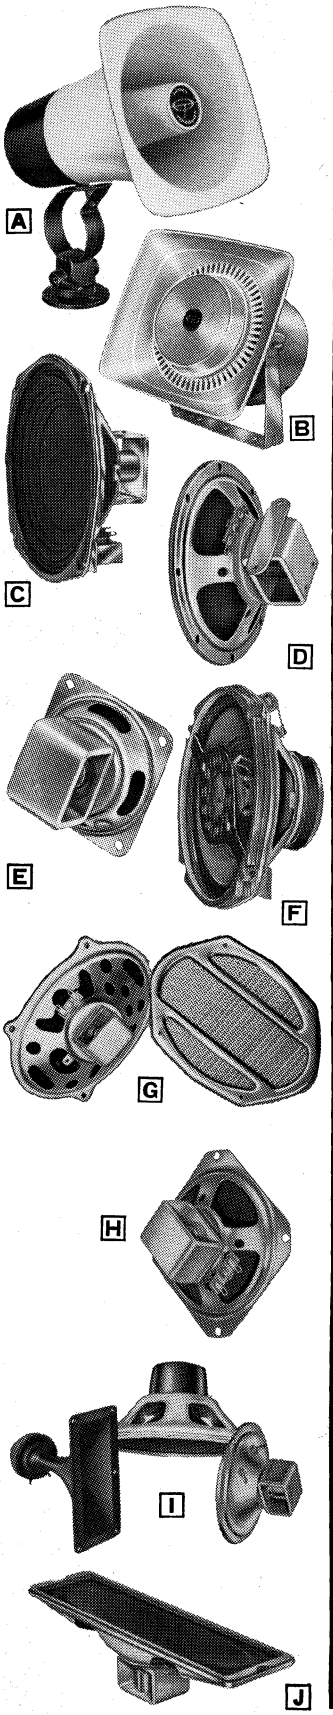
Quality Speakers for Every Application



A OP SPECIALIST SERIES

Models OP-6 and OP-8 represent the most advanced weatherproof paging and talkback speakers. They incorporate new design innovations with new materials to provide the highest efficiency with the lowest distortion factors of any competitive units available.

B OH-10 WEATHERPROOF DUAL SPEAKER SOUND SYSTEM

A high efficiency co-axial speaker that reproduces music and voice with the fidelity of an expensive indoor high-fidelity speaker system yet, the OH-10 is rugged and completely weatherproof. Components are housed in die-cast aluminum inclosure which is designed to compliment every setting from the shopping center to the patio.

C PUBLIC ADDRESS SPEAKERS

Oxford public address speakers are designed for higher output, with less power input. This maximum conversion efficiency in power and coverage permits a reduction in the number of speakers usually required in an installation. And, lower rated power amplifiers may be used with a substantial savings in cost.

D INTER-COM SPEAKERS

Oxford high efficency Inter-com speakers are designed to give round, full and clear reproduction in the voice frequency range and at the same time suppress unwanted background noises. Even whispers will be reproduced with great clarity in areas with high background noise levels . . . shouts are reproduced without distortion.

E ALL WEATHER SPEAKERS

Oxford offers a complete line of All Weather speakers specifically designed for maximum operating performance regardless of weather conditions. They feature exclusive Oxford HYDRO-PRUF cones for full environmental protection. Special moisture protected voice coils prevent humidity damage. Extra heavy cadmium plating, inside and out, resists corrosion.

F CERAMIC SPEAKERS

Featuring shallow construction, these speakers are ideal for in-wall, stereo wing, picture frame, and other installations where space is at a premium. In addition to the standard models, Oxford also offers ceramic units with exclusive Oxford Hidden Magnet design. The magnet is mounted between the basket and the cone, permitting use of the dual cone for extended range while retaining the thin silhouette.

G EXACT REPLACEMENT AUTOMOTIVE RADIO SPEAKERS

A complete line is available, including exact replacement speakers, universal speakers, special units for custom automobiles, and speakers specifically designed for transistorized automobile radios.

H REPLACEMENT SPEAKERS

Oxford manufactures the most complete line of standard replacement speakers available for original equipment, including, phonographs, tape recorders, radios and television sets. The speaker sizes range from 2" through 15", in dimensions to insure a perfect installation.

I HIGH FIDELITY SPEAKERS

The Oxford line offers a full range of woofers, tweeters, extended range and co-axial speakers. They are all designed to reproduce the entire audio spectrum with true high fidelity so necessary for fine stereo reproduction. For the price conscious hi-fi equipment buyer, Oxford offers the most outstanding value.

J SPECIAL PURPOSE SPEAKERS

As a "full line" loudspeaker manufacturer, Oxford also produces speakers for many "special purposes." The most popular of these is a series designed for use with electric musical instruments, such as guitars and electronic organs. It is only with a speaker designed for this particular application that the full quality of the instrument and performance can be appreciated.

SHURE M68 MICROPHONE MIXER (TRANSISTORIZED—PORTABLE)

PRACTICAL—The Shure M68 Mixer is a practical, efficient and economical way of increasing the efficiency, usefulness and flexibility of public-address and paging systems, or tape recorders, by making it possible to use more than one microphone or other sound source. You can strategically place microphones so that everybody who should be heard will have a microphone close at hand. It is particularly useful where additional microphones are needed for panels or for audience Question-and-Answer sessions.

UNIQUE—This new mixer is unique in that it satisfies the needs of most public-address systems and serious tape recording enthusiasts, while being light enough to be portable, simple to operate and modest in cost. It is the **only** mixer which strikes a happy medium between the expensive heavy and complex permanent-installation type mixer and the extremely low-cost units of limited usefulness.

With the M68, each microphone (or other sound source) can be cut in or out of the system (and independently balanced for volume) with no loss in microphone output level. In addition to independent volume controls, a master volume control simultaneously controls the gain of all inputs. The M68 can, therefore, be used as a conveniently "at-hand" P.A. system volume control in situations where the regular amplifier is located some distance away.

VERSATILE—You can use high or low impedance microphones, in any mix, with any type amplifier without need for expensive line transformers.

You can tape record from multiple sound sources or record sound-on-sound with two recorders, or conveniently record important meetings with full assurance that every voice will be intelligible.

Frequency response is 30-20,000 Hz (cps)

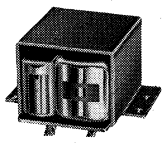
Replacements—Shure "Combinations"



RPE-23 & RPE-24—These Nortronics Head-Kits are designed as premium quality replacements for several Shure "combination" heads originally developed in the early years of tape recording. They are called combination heads because the Erase and Record/Play functions (normally two separate heads) were contained in a single assembly and mounted as if they were one head. For specific replacements, see the table above. RPE-23 will fit the same models as the RPE-20 plus the very old model Revere & Wollensak monophonic machines.

Net Each **$15.60**

Conversion Kits—for Revere & Wollensak Models

WR-30—Converts all monophonic Wollensak and Revere tape recorders to full-track Record/Play. Fully assembled. Net Each **$57.00**

WR-35—Retains monophonic Record/Play capabilities—converts 2-track stereo to 4-track stereo Play. Fully assembled. Net Each **$25.50**

WR-40—Converts monophonic machines to monophonic Record/4-track stereo Play. Fully assembled.....Net Each **$32.50**

WR-60—Positive shifter provides four-channel monophonic Record/Play, 2 and 4-track stereo Erase/Record (requires additional second channel record pre-amp). Fully assembled.....Net Each **$49.50**

TAPE OF THE HIGHEST QUALITY WITH EXCLUSIVE PLUS FEATURES...

Head-Kleen Tape Leader—CO-05 Micro-Lapping Abrasive polishing leader pre-spliced on both ends, cleans heads and guides on every run-thru. Plus—Reversing Tabs on both ends for automatic bi-directional or automatic stop recorders. Improved coating and finishing provides denser flatter oxide surface for improved, consistent high frequency response. Standardized bias requirement provides higher output without resetting bias. Special processed oxide minimizes distortion at standard bias setting. Oxide layer has exclusive dry lubricant to prevent wow and flutter, and reduce head wear. Special formulated hard, scratch resistant surface eliminates flake-off peeling, and deposits on guides and heads. Attractively Boxed.

ROBINS® BRAND BALANCED SOUND RECORDING TAPE WITH ACTION PAIRED LOW TORQUE REELS...

Now for the first time a Professional Quality Tape is available with Low Torque Reels. Up till now only pre-recorded tapes produced by all the major recording companies had low torque reels because the larger hub reduces the force (torque) required to wind tape steadily and evenly, thus reducing wow and flutter. Recording tape on Low-Torque Reels is a ROBINS FIRST!

ROBINS® BRAND CORRESPONDENCE TAPE WITH REUSABLE IMPACT RESISTANCE PLASTIC TAPE MAILING CANISTERS

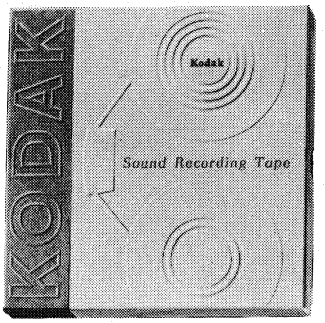
KODAK SOUND RECORDING TAPES

IRC, Inc.



Whatever your recording needs there is a KODAK Tape to do the job. For a general-purpose tape with low-print characteristics, choose Type 31A. Type 34A is a high-output tape which can also be used as a low-noise tape if record levels can be adjusted. For longer-playing applications try Types 21A and 21P (extra play) or Type 11P (double play). And now, Type 12P for triple-play. You'll find KODAK Sound Recording Tapes are available in a complete range of sizes and windings for amateur and professional use.

- **KODAK MEANS QUALITY.** The only professional quality tapes available at popular tape prices. Two great types . . . Professional Low Print-Through and Professional High Output. Both are lifetime coded to identify the brand and provide convenient indexing.
- **CONSISTENT UNIFORMITY** due to Eastman Kodak's exclusive emulsion process, consistent high quality is maintained from batch to batch and from reel to reel.
- **NO STRETCH.** New DUROL® base material is the Eastman Kodak's cellulose triacetate that is smooth, tough and durable. Breaks are clean . . . splices are made quickly, easily with minimum program loss.
- **NEW BINDER MATERIAL.** Coatings of "R-type" binder give a smoother, tougher recording surface that reduces tape noise and distortion. It is extremely abrasion resistant, preventing oxide build-up at the recording head.
- **THREAD EASY REEL** loads fast and easy. Rugged one-piece construction has indexing scale, built-in splicing jig and handy writing surface for tilting or identification. Supplied at no extra charge with all 5 and 7 inch rolls of KODAK Tape.
- **DURABLE LIBRARY CONTAINER.** Tough one-piece construction means package won't come apart even with heavy usage.

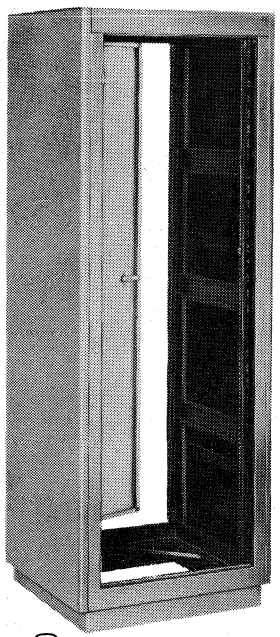
Series "60" Cabinet Racks



Ⓐ Upright Rack

Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG.** For two-tone blue, add suffix **SB** to order number. Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue; when ordering, add suffix **SG** for gray; **SB** for blue.

UPRIGHT CABINET RACKS (FIG. A)

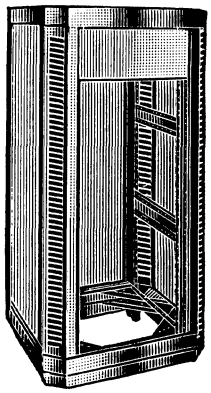
●NEW ZEPHYR 8 CABINET RACKS



Combine striking appearance with increased utility, extra ventilation, and unusually sturdy construction. Units are completely assembled with all-welded 14 gauge steel frames. Sides and reinforced rear door are of 16 gauge steel. Sides of frame are reinforced by channel braces to which panel mounting rails are attached; front and rear mounting rails are adjustable. Sides may by removed from outside of rack for easy access to interior. The octagonal shape and louvres placed in the four narrow sides permit exceptional ventilating capability. If corner placement is desired or combinations of racks are placed together, this shape allows for a "center ventilated system." Also, the outer shape surrounding the inner structural frame provides extra space for longitudinal or vertical placement of plenums, cable-track, buss ducts, etc. Casters may be attached to the base or removable sub-base. Front doors, available as optional accessories, are equipped with a flush-type latch. Available in two-tone gray finish only.

Bud Slimline 901 Imlok is based upon the same, proven principles as the Standard Imlok system. The basic difference is lighter weight and narrower appearance of the extrusions; corner connectors are smaller in size and are not visible in the completed housing. Connectors are 380 aluminum die castings; extrusions are 6063 aluminum. A really attractive small rectangular case, large elegant console or multiangular structure can be made with Slimline 901 Imlok. Whether for a production run or a single prototype, we can supply the material or make a complete enclosure.

L M B® PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

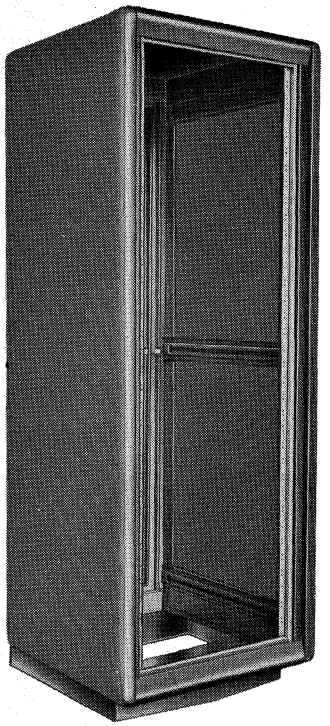
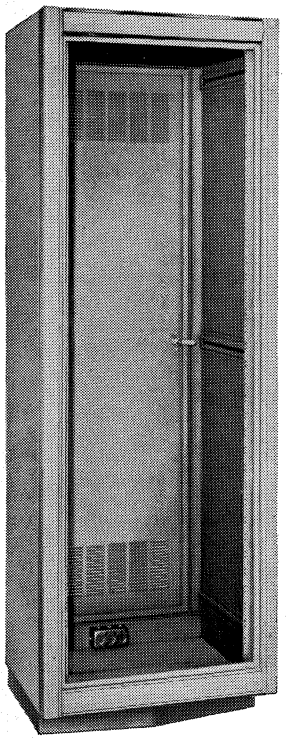
SUPERIOR CHARACTERISTICS OF

PAR-METAL Modular Cabinet Racks



SERIES "PL" RACKS
With Rear Door Only
Equipped with optional detachable ball cornered side panels and recessed base.

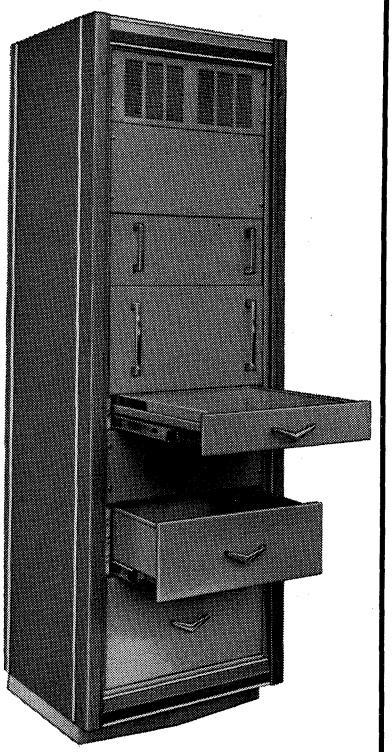


SERIES "PX" RACKS
With Rear Door Only
with SOLID SIDE WALLS
(Recessed base is optional)

PAR-METAL cabinet racks listed on **Par-Metal Pages 3 to 8** merit your serious consideration. They incorporate many features derived from long experience in the manufacture of electronic housings exclusively.

The distinctive styling and versatile design make them adaptable to many applications. At no time has sturdiness been sacrificed for styling; our emphasis has been on a **rigid, welded assembly** to assure stability and freedom from structural weakness under severe mobile usage.

DESIGN: All sizes listed may be obtained with conventional solid side walls, or with open side walls and detachable side panels. Side shields for use between racks are also available.



SERIES "PR" RACKS
With Rear Door Only
Equipped with optional flush detchable side panels and recessed base.

Racks are available for 19", 24", and 30" wide panels. Cabinet heights are 48-1/8", 58-5/8", 67-3/8", 76-1/8", 83-1/8" and 90-1/8". Racks 18" and 24" deep are listed. We have facilities to fabricate racks with panel widths to *48"*, and any depth to *36"*.

MODULAR GROUPS: All models may be joined into modular groups: cabinets of the same height, in varying panel widths with and without front doors, may be intermixed; Series "PL" racks may be combined with our console units.

•

MID-RAIL MOUNTING OF PANELS: The panel mounting angles or "strips" are fully adjustable on all racks, and may be positioned at any location from front to back. Additional panel mounting angles may be easily inserted where needed for mounting terminal boards, etc.

•

VERTICAL SIDE SUPPORTS: These supports provide a simple method for supporting chassis and other equipment in the racks. The means of attaching such brackets is fully adjustable so that chassis may be accurately lined up with the front panels. No drilling or other fabrication is required. The chassis may then be installed or removed with a minimum of effort. The vertical side supports also facilitate the installation of special sliding devices.

•

ADJUSTABLE FLOOR LEVELERS are supplied with all racks as standard.

•

SLIDING SHELVES AND DRAWERS: These are constructed for mounting on the front of the racks the same as regular panels.

•

SLOPING INSTRUMENT PANELS and EXTENSION DESK TABLES for single and modular assemblies are available for all modular racks.

•

ANGULAR SECTION FRAMES are available as standard units for all Modular Cabinet Racks listed on **Par-Metal Pages 3 to 8,** with a choice of 30° or 45° angles.

MODIFICATIONS: Without departing from the basic design of our racks, it is possible to modify them to meet your special requirements. Standard ventilated tops are available. They may also be modified with our standard dies for making openings, louvers, circular holes, etc., in side, tops, bottoms and doors of racks.

All of our products incorporate the same exacting standards of quality and uniformity which we have maintained for over three decades. If you have a specific problem, do not hesitate to consult us. **Personalized and interested engineering assistance is always available.**

DETAILS OF CONSTRUCTION AND ASSEMBLY

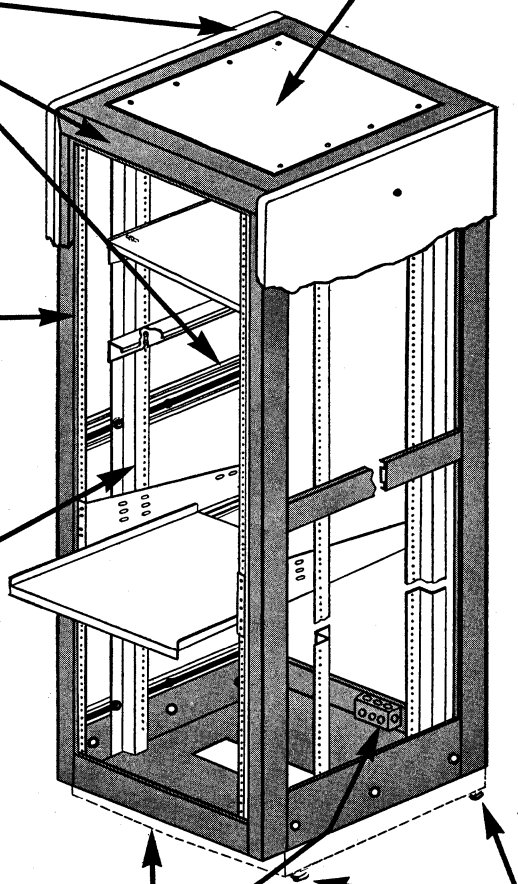
The cabinet rack illustrated below is our **PL-FL** Series, completely assembled with vertical trim strips and horizontal mouldings at top (and bottom). The ball cornered side panels are also attached.

The same frame is used in our **PR-FR** Series racks. However, the styling is distinctively different, and permits the use of flush side panels. Series **PX-FX** Racks are similar in appearance to the PR-FR Series, except that the side walls are an integral part of the rack; separate side panels are not required.

REMOVABLE TOP PANEL: Also available with standard ventilating type panels (Louvers, Perforated Metal, etc.).

DETACHABLE SIDE PANELS:

FRONT MOULDINGS:



- **BOLT RETAINER RAILS:**

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from 7/64" steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with 3/8" diam. steel bolts, lock washers, and hexagon nuts.

- **PANEL MOUNTING ANGLES:**

They are made from 1½" x 1½" x 3/16" thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on 5/8"-5/8"-½" alternate spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

Holes tapped 10/32 thread are optional without additional cost.

- **VERTICAL SIDE SUPPORTS:**

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes are 5/8"—5/8"—½" alternate centers, tapped 10/32 thread, provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from 7/64" thick steel, locked in place with 3/8" diameter screws, lock washers and hexagon nuts, to afford maximum support.

- **SIDE MOUNTING BRACKETS:**

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of 1/16" steel, and "dutch-formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.

- **OUTLETS:**

"Knockout holes" are available on cabinet side for connecting cables; a duplex outlet and outlet box are mounted on cabinet under rear door.

- **FLOOR LEVELERS:**

Four are supplied with all modular type racks.

- **RECESSED SUB-BASES:**

They are available for all modular type racks as an optional accessory.

FLUSH MOUNTED SIDE PANELS

Side panels are sturdily constructed from #16 gauge steel; they have formed edges, and are welded at all four corners. The vertical edges are trimmed with recessed stainless steel mouldings to harmonize with the styling of the front of the rack.

They are supplied with coinciding brackets at the bottom, for easy alignment with the rack sides. At the top, they are secured with a cowl type fastener, making them readily removable. Panels are 3/4" thick. They are available in all finishes to match racks.

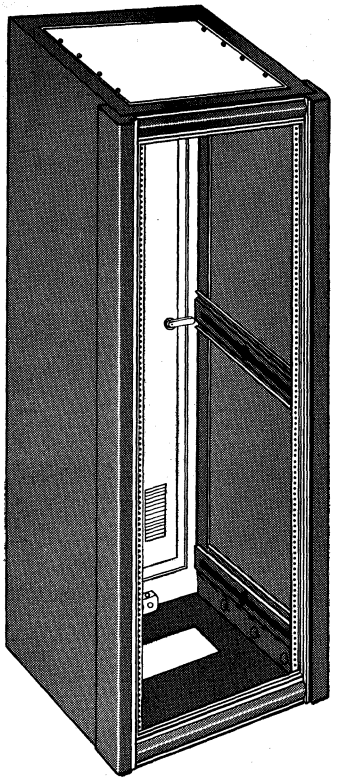
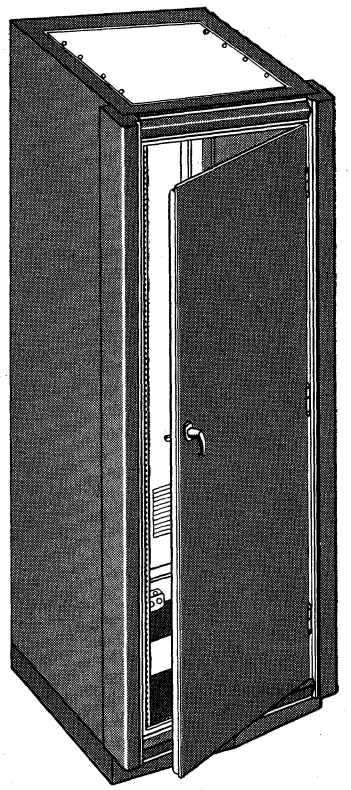
SERIES PX & FX RACKS WITH SOLID SIDE WALLS

FOR 19" — 24" — 30" WIDE PANELS — 18¼" & 24¼" DEEP



* SERIES PX RACKS
With Rear Door Only



SERIES FX RACKS
equipped with
recessed base

* The **RECESSED BASE** is an optional accessory and is available at an additional cost (see opposite page).

SERIES PX AND FX RACKS are similar to our *PR* Racks listed on *Par-Metal Pages 5* and *6* except that they are constructed with *SOLID SIDE WALLS* as shown. Where open side racks are not required, the cost of detachable side panels is eliminated.

These racks feature the same horizontal mouldings and corner trims used on our *PR* Series, resulting in a trim, compact appearance. The new styling, in effect, provides an attractive frame around the front of the rack where contrasting color finishes are used.

RACK CONSTRUCTION: The front, sides and doors are made from #16 gauge steel (0.059"). Trims are #18 gauge steel (0.048"). All other parts including the top and bottom are made from #12 gauge steel (0.104") securely welded for rigidity and stability.

PANEL MOUNTING ANGLES: Angles are made from 3/16" structural steel. Hole spacing meets both WE and EIA requirements. Holes are tapped for 12-24 screws, 10-32 tapped holes are optional at no extra cost. Angles are rigidly secured with three 3/8" diameter bolts; angle may be located at any position from front to rear.

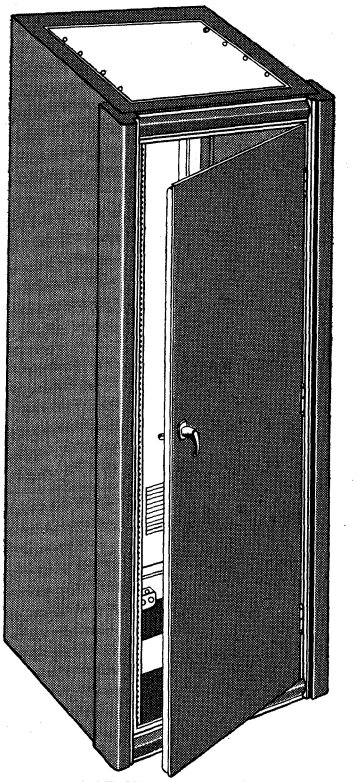
DOORS: A louvered rear door is regularly supplied on all racks; on *FX* racks, an additional front door (less louvres) is supplied. Plain doors, or doors louvered at the top or bottom are optional at no extra cost (See Par-Metal Page 11). Racks 30" wide have double doors with three point latching devices in center, to save aisle space.

HINGES: Doors are mounted on slip-joint hinges and are easily removable.

HANDLES: Door handles are die cast with chrome plated finish. *PX* Series doors have non-locking handles. Front and rear doors of *FX* racks have locking handles with keys. Locking handles may be obtained for *PX* Series doors at $1.00 each additional.

TOP PANELS: All racks have removable blank top panels. Ventilating top panels are available, (see Par-Metal Page 11).

RACK LEVELERS: Four holes are provided for insertion of levelers supplied with each rack.



* SERIES FX RACKS
With Front and Rear Doors

RACK BASES: Heavy duty bases are optional at small extra cost. Where roller trucks are used rack bases are not required or recommended.

CONVENIENCE OUTLET: A grounding type duplex outlet is located at the rear below the door.

HARDWARE: All necessary bolts, screws, washers, nuts, and panel mounting screws are included.

DRAWINGS: Detailed drawings are available for all these racks.

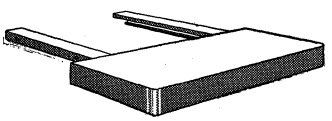
RACK TYPE EXTENSION TABLES



These tables are mounted to the front of cabinet racks. They are made from 3/4″ plywood to which is bonded 1/16″ thick laminated plastic of a dark grey pattern on both top and apron, which is 2-1/2″ high.

The apron is substantially reinforced for fastening to horizontal channel type supports. The channels are made from 7/64″ thick steel, and are bolted to vertical side supports which are securely mounted on the inside wall of the rack. The tables may be adjusted at any height from the floor. This assembly provides a very rigid structure, with a smooth writing space across the entire top. There are no metal parts exposed, and no painted metal surfaces to deteriorate with constant usage.

The tables may be installed on any of the modular cabinet racks (without front doors) listed on PAR-METAL Pages 3-8. They are also available for modular rows of four or more racks.

ALL OF THESE TABLE ASSEMBLIES REQUIRE ONLY 3-1/2″ PANEL SPACE (height).

They may be used with the slope **upward** or **downward.** They are supplied complete with removable front and back panels. Available in all standard rack finishes.

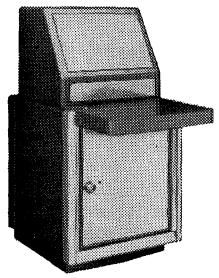
PAR-METAL MODULAR CONSOLE ASSEMBLIES

GENERAL DESCRIPTION

SINGLE UNIT ASSEMBLY



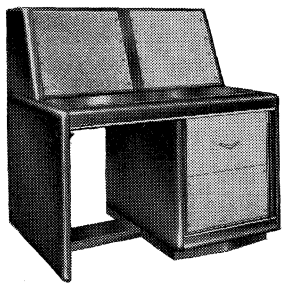
This illustration shows one of our three basic single unit assemblies. Other single unit assembles are shown on the next page.

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, **we have devised a group of standard units,** the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. These models have been functionally designed and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

The **versatile pedestal racks** are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our PL cabinet racks listed on PAR-METAL Pages 3 and 4. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are **solidly built** to withstand heavy strains **whether in a laboratory or a moving vehicle.**

DOUBLE UNIT ASSEMBLY



In this double unit assembly, the pedestal rack can also be fitted on the left side.

Two models of pedestal frames are available, which are identical except for the depth (front to back). PD-224 frame (24¼" deep) unit may be used with or without an extension desk table.

The PD-234 frame (34¼" deep) forms a complete desk structure without the use of extension shelves. When one of our desk panel cabinets is mounted on top, additional space is available in front as a desk writing surface. The 34¼" depth also provides additional interior space.

There are four models of desk panel cabinets suitable for mounting on the pedestal frame top to make a complete console. Single or multiple unit consoles may be combined with our Series PL racks.

Unit assemblies are not limited to quad units, and may be extended to modular groups of five or more. **If you have a specific problem, do not hesitate to consult us.**

The **side panels** are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws—no metal screws or clips are used.

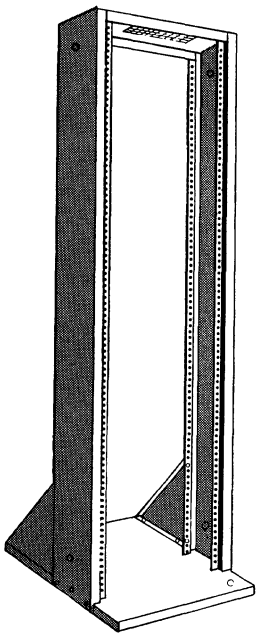
PAR-METAL CHANNEL RELAY RACKS

DELUXE TYPE RACKS for 19" and 24" wide panels



No. RR-197

These DeLuxe Channel Type Relay Racks **are made from 7/64" thick steel,** and extend the utility of the channel relay rack for **both Electronic and Electrical applications.** The panel spaces available are: 61-1/4", 70", and 77" for both 19" and 24" wide rack panels.

The upright channels have been modified to an 8" overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10/32 screws at **both front and back** on 5/8"-5/8"-1/2" alternate centers permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The **full** panel space is available on the back, the same as the front.

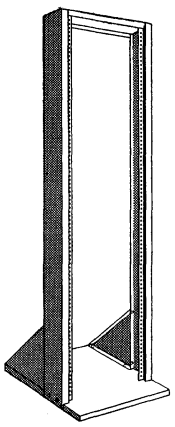
Clear distance between panel mounting flanges (from front to back) is 6-7/8". It is practicable to use this depth as an enclosure for dish type chassis listed on **Par-Metal Page 26.**

When such chassis are mounted at the back, the addition of standard or hinged type panels (see **Par-Metal Page 24**) will make a rack enclosure with a clear depth of 6-7/8".

The top is provided with a grille for ventilation where needed. It is also trimmed with a chrome finished moulding at the front. Two holes are located on each side for bolting racks together in rows; there are no projecting screw heads on the sides. Top brace and vertical channel members are securely welded together. Base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

FINISH: Standard finish is black ripple enamel. Blue grey wrinkle or grey hammertone is also available without extra charge if so specified on your order. **OTHER FINISHES ALSO AVAILABLE**

STANDARD TYPE RACKS for 19" wide panels



No. RX-195

THESE RACKS are sturdily constructed from 7/64" pressed steel, and are braced at the back as illustrated, and will withstand severe abuse. They have a formed recess for the panels; the edges of the panels are not exposed.

Top brace and vertical channel members are securely welded together. Base and rear braces are shipped knocked down, with necessary bolts for assembly.

Panel mounting holes are accurately drilled for standard rack panels, tapped for 10-32 machine screws at the front only. An ample supply of panel mounting screws are supplied.

Upright channels are 3-3/16" deep with flanges 1" wide. Clearance between uprights is 17-15/16". Base is 20-7/8" deep and extends both front and rear, and is 21-1/16" wide for either unit.

FINISH: Standard finish is black wrinkle. For blue grey wrinkle or grey hammertone enamel add 10%.

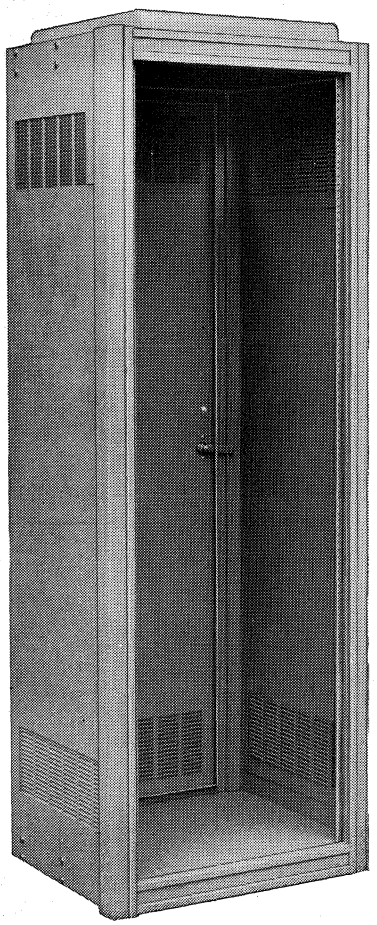
PAR-METAL TYPE "A" RELAY RACKS

DELUXE TYPE—FOR 19" WIDE PANELS



"ER" SERIES
WITH REAR DOOR ONLY

CABINET: The entire cabinet is made from 1/16" sheet steel. The sides are adequately ventilated with "venetian" type louvres similar to our modular cabinet racks. The vertical corner trims and formed mouldings at top and bottom are designed to effect a distinctive frame around the front of the rack. Racks are shipped **"knocked down"** for easy assembly.

CORNER TRIMS: All front vertical corner and joining trims are narrow type (do not overlap panels) to permit installation of sliding shelves, drawers, tables, etc.

PANEL MOUNTING: Angle irons are 7/64" thick steel, holes are accurately drilled and tapped 10-32 thread for all types of panels.

HARDWARE: Doors are the same as our modular racks. **"Series ER"** racks are equipped with die-cast non-locking handles on rear doors.

On **"Series FD"** racks, similar handles with key locks are used on both front and rear doors. Hinges are the "slip-joint" type so that doors may be easily removed.

FINISH: Blue grey wrinkle finish is standard. Black wrinkle enamel or grey hammertone enamel is also available without extra charge if so specified on your order.

ROLLER TRUCK: Use either No. RT-412 or HD-412 for all racks listed on this page; roller trucks are listed on **Par-Metal Page 22.**

PANELS: Panels 19" wide to fit these racks are listed on **Par-Metal Pages 23** and **24.**

SHELVES: For Series ER Racks use shelf No. ER-2212 listed on **Par-Metal Page 26.** To install shelves in Series FD Racks, it is recommended that Vertical Side Supports, Brackets and Shelves listed on **Par-Metal Page 10** be used.

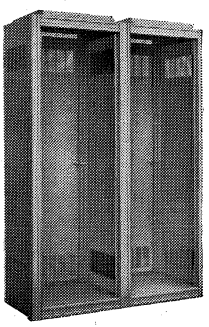
MULTI-RACK CABINET ASSEMBLIES



MULTI-RACK ASSEMBLY

MULTI-RACK ASSEMBLIES: Both **Series "ER"** and **"FD"** racks may be set up in rows as shown. The use of "venetian type" louvers provides a flat exterior surface on the sides of the racks; separate side plates with welded screw studs inserted at top and bottom of adjacent sides simplifies the assembly — no screwdrivers or wrenches are needed. Vertical joining trims overlap the joint between racks on the sketch.

SERIES "FD" RACKS: This series with front and rear doors has adjustable panel mounting angles, which may be located at any distance from front to rear of rack. VERTICAL SIDE SUPPORTS listed on **Par-Metal Page 10** will fit into these racks.

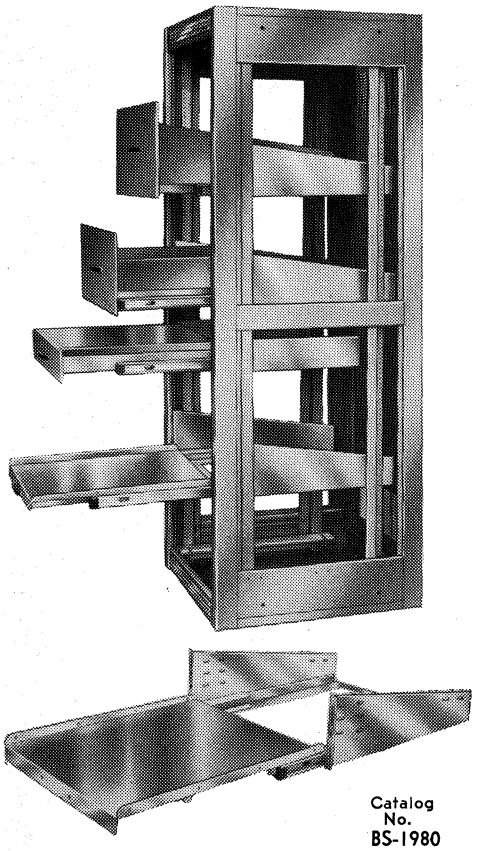
PAR-METAL RACK TYPE SLIDE ASSEMBLIES



GENERAL DESCRIPTION

These slide assemblies will save considerable layout and assembly time by eliminating the need to align and mount individual slides directly to the interior of a rack.

All models consist of two units: a heavy cradle made from 7/64" steel, and the sliding unit (either the basic shelf, drawer, or desk shelf). The cradle is first mounted to the rack; the sliding unit slips into place on the cradle, **and may be removed when desired.** Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

The basic slide assemblies for use in 19" wide panels **racks will accommodate chassis up to 17" wide.** All of the "usable space" noted below may be fully extended from the front of the rack; load capacities are based on the shelf in this position. All units are ruggedly constructed to withstand constant usage. All parts are securely welded or fastened with stainless steel rivets.

BASIC SLIDE ASSEMBLIES

The basic slide assembly illustrated is sold as a complete unit, ready for installation in all 18" or 24" deep racks. Panels may be attached to chassis by using standard brackets or any other convenient method. The panel and chassis assembly is then bolted directly to the slide pan.

Formed panels with a minimum height of 7" are recommended. Four models are listed to fit racks using panels either 19" or 24" wide. The BS-1940 and BS-2419 are identical in size, but have different load capacities.

***All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended.** All parts are zinc plated.

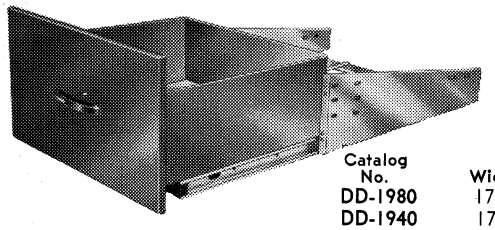
Special brackets are available for mounting rack panels, as listed on Par-Metal page 26.



STORAGE DRAWER ASSEMBLIES

These drawers are suitable for stationery, instruments, parts, etc. The drawers are mounted on the basic slide assemblies described above. They are available either 7" or 10½" high to match standard rack panels of the same height. Three models are listed for racks with 19" wide panels, and one for 24" wide panel racks.

DESK SHELF ASSEMBLIES

This assembly effectively provides a retractable writing desk, or may be used for supporting test instruments or other devices. When not in use, it saves valuable aisle space. The writing surface is charcoal grey plastic. The front requires only 3½" of panel space, and is provided with a drawer pull. It is made for racks using panels either 19" or 24" wide. No. SK-1970 and SK-2419 are identical except for load capacity.

EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
B. Figure "A" shows two Expand-A-Racks joined together.
C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

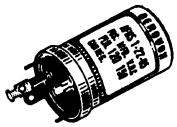
ELECTROLYTICS



TYPE AFH (85°C) TWIST PRONG ELECTROLYTIC CAPACITOR

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

ELECTROLYTIC CAPACITY TOLERANCES

0-50 Volts	—	—10 +250%
51-350 Volts	—	—10 +100%
351 Volts & Up	—	—10 +50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of 1212 ratings may be found in the latest Aerovox Industrial Catalog, IDC 565, or Servicemen's Catalog, SE-565, and may be requested from Aerovox Corporation, Distributor Division, or through your nearest authorized Aerovox Industrial Distributor.

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.
Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.
Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.
Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.
Tolerance and surge voltage are in accordance with EIA Specification RS-154.
The factory is currently in the process of reducing sizes of this type. Aerovox reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

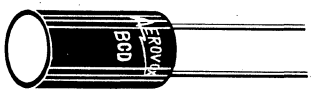
TYPE B C D UPRIGHT MOUNTING BAKELITE CASED ELECTROLYTICS



"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case.

ELECTROLYTICS — (Continued)

TYPE QE 61

Type QE capacitors are aluminum electrolytics designed for applications requiring high reliability and long life. Typical applications are in computor equipment, power supplies, telephone networks, industrial electronic equipment and high grade commercial and laboratory test instruments.

These units are manufactured with special high purity materials and processed under controlled conditions of cleanliness with the most modern equipment available. The aluminum container is hermetically sealed and furnished with low screw inserts with a pressure type safety vent provided in the cover.

Operating temperatures for QE61 is —20°C to +65°C. Standard capacity tolerance 2.5 Volts to 150 Volts is —10% +100%. For 151 Volts to 450 Volts —10% +50%. QE61 will be furnished with heat shrinkable mylar tubing which adds only .010 to the diameter and .020 to the length of the can size as shown.

For complete engineering details including ripple currents, dissipation factor, etc., request our latest bulletin NPJ-125.

TYPE V161

AEROFILM® (MYLAR*) CAPACITORS

V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.

Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%

AEROVOX CAPACITORS

Type K323Z
Metallized Polycarbonate Capacitors

If plastic sleeve is desired add suffix "P" to type number and specify when ordering. Add 1/16" to the diameter and length and add .02 to cost of unit.

Here is the first stock line of hermetically sealed metallized polycarbonate capacitors. Polycarbonate film offers many advantages over paper or other film dielectrics including high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate offers the additional feature of self-healing in the rare case of dielectric breakdown. Size and weight savings over paper capacitors are most obvious in lower voltage ratings but the added stability is an important plus at the higher voltages. Operating temperature is -65°C to +125°C at full rating. Standard tolerance is ±20%. Other tolerances available on special order. For full technical information request bulletin NPJ-136.

PAPER SUB-MINIATURES

Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case, for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10° C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Type P323S and P323SX are rigidly processed to assure operation over the temperature range of —65°C. to +125°C. The capacitor sections on types P323S utilize an inserted tab construction to obtain minimum size. Type P323SX utilizes extended foil construction for those applications where operation is required at very low AC voltages.

For equivalent types rated —65°C. to +100°C. in the same case size as shown order as P123S, SX, etc. and request prices.
These subminiature units are widely used in many applications because of their high reliability and varied case styles. To order any of these style variations add the suffix letter shown to the basic designation listed.

METALLIZED-PAPER CAPACITORS

TYPE P8292ZN PLASTIC-CASED, METALLIZED-PAPER TUBULARS

Featuring an exclusive "polycap" plastic-case construction, these capacitors offer outstanding resistance to humidity and improved insulation resistance. The high temperature impregnant permits operation over the temperature range of −30° to +100°C at working voltage. Distinctive black cases are completely free of any wax coating to facilitate handling problems in automatic insertion and assembly equipment. Standard tolerance on these units is ±20%. Available in closer tolerances upon request at an additional charge. Mechanical Tolerances— ±1/16" on length and diameter.

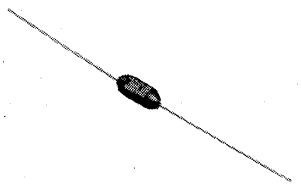
TYPE P95ZN

Micro-Miniature Dipped Metallized Paper Capacitors



Aerovox Type P95ZN capacitors employ an entirely new internal construction concept and utilize a dipped resinous housing to produce remarkably small sizes. The dielectric is a distinct departure from conventional foil paper and previous metallized paper construction. This new and improved metallized dielectric provides both the dielectric and the electrodes. Since capacitance is predetermined mechanically in the initial processing, the human element is eliminated for capacitance control. In addition, the P95ZN offers unusually strong lead connections as the result of an exclusive Aerovox manufacturing process. Leads are hot tin-coated phosphor bronze.

These Aerovox micro-miniature capacitors are especially suited for applications where low capacity units are now being used.

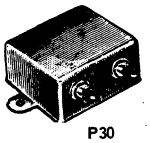
INDUSTRIAL SECTION — MIL TYPES MIL-C-25C



TYPES CP53, CP54, CP55

Hyvol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).

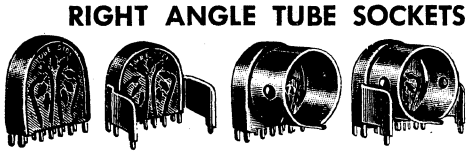
RIGHT ANGLE TUBE SOCKETS



Type A Type AX Type B Type BX

Ordering Example: RA7A = (Type 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket

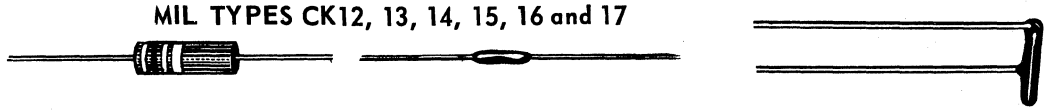
CERAFIL®



These remarkably ultra-miniature units, Molded Type MC80V and Durez Coated Type C80V, are designed primarily for air-borne and space-borne equipments, having critical space and weight parameters. They are also designed for transistorized circuit applications in hearing aids and other critical requirements where space and weight are at an absolute premium. The unique design and construction features of Cerafil® capacitors make it possible to obtain extremely high capacities per unit volume. These tiny capacitors are the ideal answer to many problems created by the growing trend towards miniaturization of electronic assemblies and equipments. When tested using Cerafil® ratings, these units will meet or surpass the requirement of MIL-C-11015C.

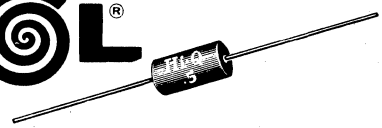
CEROL®



HIGH CAPACITY, HIGH RELIABILITY, ROLLED CERAMIC CAPACITORS

Cerol® capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at rated voltage —55°C to 85°C and at 50% rated voltage —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015C.

Units are stamped with the rated voltage for identification of type.

Eyelet Feed-Thru Capacitors

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.
